CSRN PRODUCTION SUITE · VOLUNTEER FIELD GUIDE

STATISTICIAN SCREEN

FOOTBALL · GAME-DAY DATA ENTRY, PHASE BY PHASE

You've been handed the stat chair. This guide walks you through a complete football game on CSRN's Statistician Console — from the moment your screen opens to the moment the game is closed out as Final — one phase at a time, explaining every button and field the first time you touch it.

Every screenshot was captured from the real Statistician Console (CSRN Production Suite Version 1.13.0-alpha.8f) driving a fictional demo game: **Northgate Falcons vs. Riverside Otters**, broadcast FB-DEMO-GUIDE-001. All schools, players and numbers are invented.

Covers the Statistician screen only. Broadcast creation, rosters, OBS and the Broadcaster/Director consoles are handled by your producer.

IN THIS GUIDE

0	Before You Start: How This Screen Thinks	6	Ending a Quarter
1	Pregame: Opening Your Screen & the Coin Toss	7	Halftime
2	The Opening Kickoff	8	The Second-Half Kickoff
3	Live Play Entry: The 1st Quarter	9	4th Quarter & Overtime
4	Jerseys That Don't Match (Unresolved Players)	10	End of Game: Confirm Final
5	Scoring Plays: TD, PAT, 2-Point, FG, Safety	A	Quick Reference Card

Your job in one sentence

You tell the system **who had the ball, who touched it, and where the ball ended up**. The system works out everything else — yards gained, down and distance, first downs, touchdowns, safeties, possession changes and the score — and pushes it to the broadcast graphics and the official stats.

THE THREE GOLDEN RULES

1. Keep up with the game. Enter each play as soon as the ball is dead. Speed beats perfection; almost anything can be fixed later.

2. Never stop to troubleshoot live. If a jersey won't match or something looks odd, record the play anyway, jot down the play number, and tell your producer at the next break.

3. Mistake? Use Undo. If you notice a wrong entry right away, **Undo Last Event** removes it cleanly. Then enter it again correctly.

Field-spot language: LEFT and RIGHT, not team names

The screen describes the field as you see it from the press box: the **LEFT GOAL** line, the **50**, and the **RIGHT GOAL** line. A spot such as `LEFT 30` means "the 30-yard line on the left half of the field." Arrows such as **R** ← or **N** → show which way a team is driving. Teams switch ends every quarter; the screen flips the arrows for you.

What you'll need

- The 6-digit **operator PIN** — your producer gives it to you.
- The phone, tablet or laptop you'll enter stats on, connected to the same network as the production laptop.
- Both teams' printed rosters (jersey numbers), and a pen — for noting plays that need a follow-up fix.

START HERE

0 Before You Start: How This Screen Thinks

Two ideas make the whole console make sense: you are the official source of game data, and every play is entered as a *start spot → end spot* movement.

You are the authoritative source

When the producer hands control to the Statistician Console, the broadcaster's game-data buttons lock and your entries become the official record. That's why the header of your screen says **ACTIVE** and "Statistician Console is the authoritative game-data source." If it ever says DISABLED instead, stop and tell your producer — your entries would be blocked.

Every play is a movement on the field

For runs, passes, punts and kicks you set where the ball **ended** on a slider. The start spot is already filled in from the previous play. The system subtracts the two to get yards, then applies the football rules: reach the line to gain and it's a first down; reach the end zone you're attacking and it's a touchdown; get pushed back into your own end zone and it's a safety. You never type yards and you never press a "first down" button for normal plays.

The screen guides you through special moments

After a touchdown the screen shows a **TRY REQUIRED** panel; after a score or at the start of a half it shows **KICKOFF REQUIRED**. While one of those is showing, the normal Run/Pass buttons are hidden or blocked, so you can't accidentally skip the try or the kickoff. Follow the panel at the top and you will always be on the right next step.

Color on screen	What it means
Green jersey name under a number	Jersey found on that team's roster — player resolved.
Amber "Not found on active roster"	Jersey not on that team's roster. The play still records; see Phase 4.
Green-outlined team card	That team is on **OFFENSE** (has the ball).
Gold-outlined team card	That team is on **DEFENSE**.
Red **Record Play** / **Confirm Event** buttons	The button that actually saves. Nothing is saved until you press it.

PHASE 1

1 Pregame: Opening Your Screen & the Coin Toss

The broadcast is already created and live. Here's how to get to your console, confirm you're on the right game, and record the coin toss.

Step 1 – Log in and choose the Statistician console

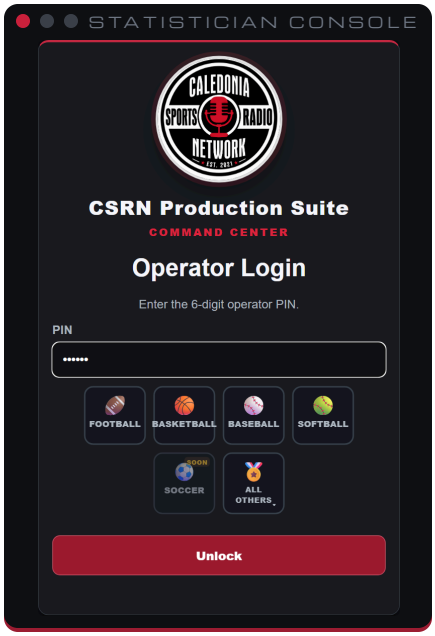

FIG 1 Operator Login. Type the 6-digit PIN your producer gives you, then press Unlock.

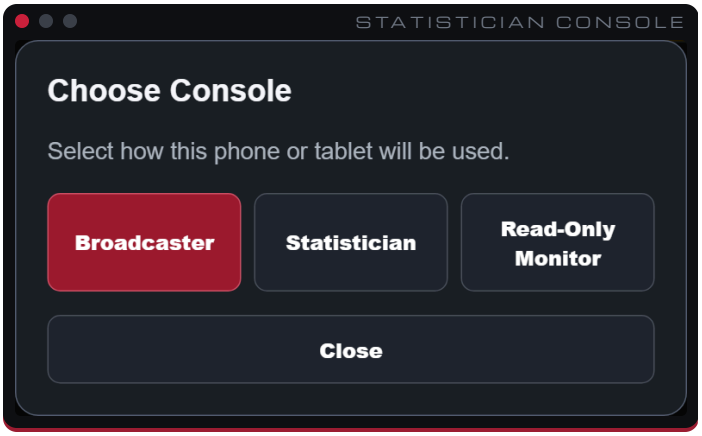

FIG 2 Choose Console: pick Statistician.

1. Open the address your producer gives you (it ends in `:5050`). You'll see **Operator Login**.
2. Type the PIN in the **PIN** box. The dots hide the digits. Press **Unlock**.
3. If you opened the connection link or QR code from your producer, a **Choose Console** pop-up appears: press **Statistician**. (Broadcaster is the play-by-play operator's console; Read-Only Monitor can't change anything.) No pop-up? Press **Switch Console** in the top-right of the header to bring it up.

Step 2 – Tour the console and confirm the game

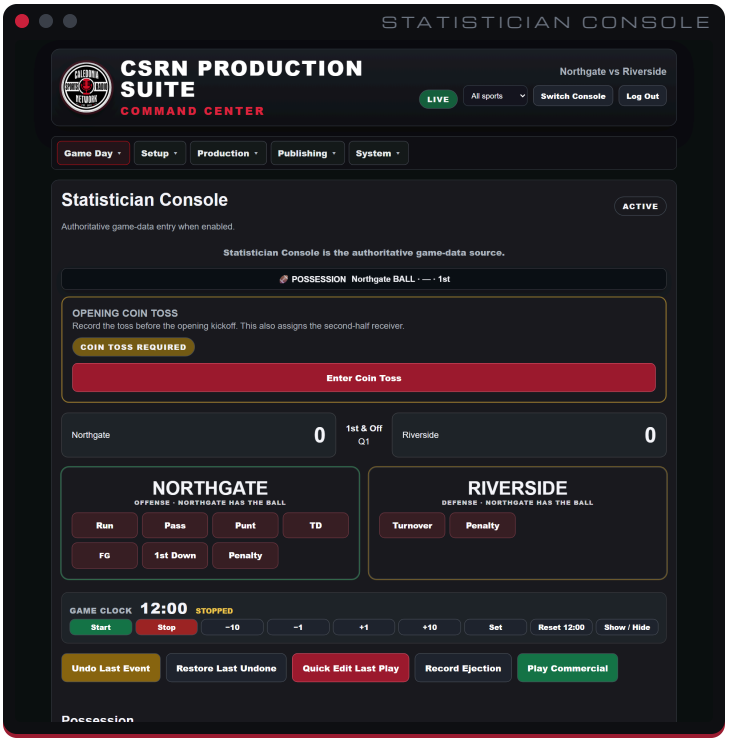

FIG 3 The Statistician Console before kickoff. The header shows the matchup and the LIVE badge; the console itself starts with the ACTIVE badge, possession strip, coin-toss panel, scoreboard and team cards.

CONFIRM YOU HAVE THE RIGHT GAME

- **Header, top right:** the matchup — here *Northgate vs Riverside*. It must match tonight's game.
- **Badge next to it:** **LIVE** means the broadcast has been started by the producer.
- **Scoreboard strip:** home team on the left (Northgate), visitor on the right (Riverside), both 0, **Q1**.
- **Statistician Console badge:** **ACTIVE**, with the line "Statistician Console is the authoritative game-data source."

WRONG GAME, OR NOT ACTIVE?

If the team names are wrong, the badge says DISABLED, or the status line says "Enable the Statistician Console from Command Center," don't enter anything. Tell your producer — only they can load the right game or hand control to you.

WHAT EACH AREA OF THE CONSOLE DOES

Status line	One-line confirmation of who controls game data, plus green/red notices after every action ("Play recorded.", or why something was blocked).
🏈 **POSSESSION strip**	Who has the ball, the ball spot, and down & distance. Your at-a-glance sanity check.
Special-moment panel	Appears only when something must happen next: **OPENING COIN TOSS**, **KICKOFF REQUIRED**, **TRY REQUIRED**.
Scoreboard	Home score, down & distance and quarter, visitor score. Updated by the system — you never type scores.
Team cards	One per team. Play buttons live here: **Run** **Pass** **Punt** **TD** **FG** **1st Down** **Penalty** on the offense; **Turnover** **Penalty** on the defense. Buttons change as possession changes.

Game Clock	Start/Stop and adjust the clock (Phase 3).
Action bar	**Undo Last Event** **Restore Last Undone** **Quick Edit Last Play** **Record Ejection** **Play Commercial**.
Lower controls	Manual corrections: Possession, Quarter, Down & Distance, Field Position, Drive Direction, plus **Period Administration** (quarters, halftime, overtime, Final) and the **Play Register** — the list of every play you've entered.

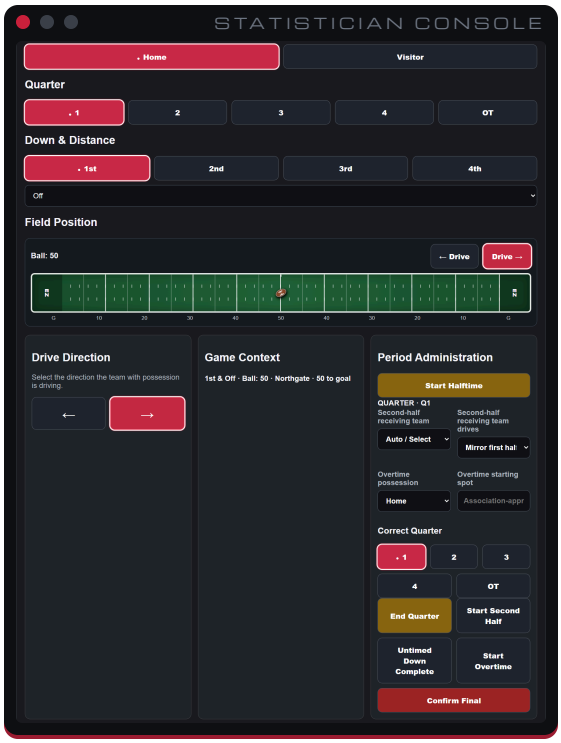

FIG 4 Lower half of the console: manual correction buttons, the Field Position slider, Drive Direction, Game Context and Period Administration. You'll mostly use Period Administration.

HANDS OFF THE CORRECTION BUTTONS

Possession, Quarter, Down & Distance and Field Position are **manual overrides**. In a normal game the system keeps them right for you. You'll use them for overtime setup (Phase 9), when the officials re-spot the ball (Phase 3, *Ball in the wrong place?*), or if your producer asks.

Step 3 – Record the opening coin toss

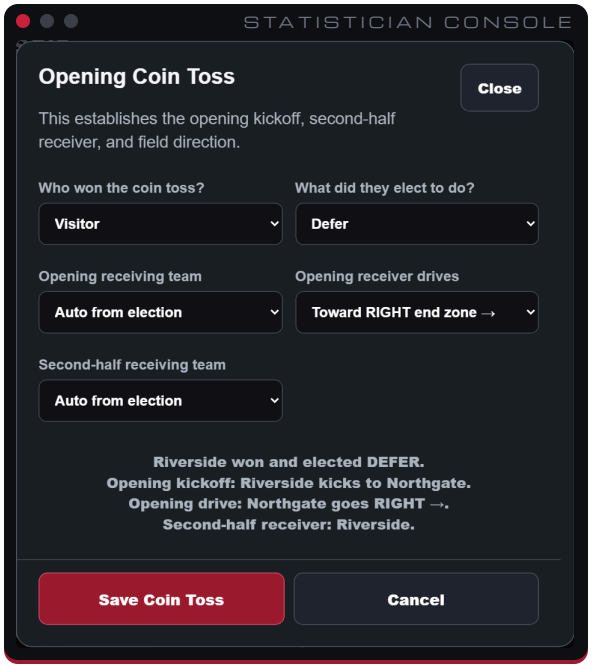

FIG 5 Opening Coin Toss form: Riverside (visitor) won and deferred.

Before the first play the console shows **OPENING COIN TOSS — COIN TOSS REQUIRED**. Press **Enter Coin Toss**.

Who won the coin toss?	Home or Visitor.
What did they elect to do?	**Receive**, **Defer**, **Kick**, or **Defend a direction**.
Opening receiving team	Leave on *Auto from election*; it's worked out from the choice above.
Opening receiver drives	Which end zone the receiving team attacks first, as seen from your seat: **RIGHT** → or ← **LEFT**.
Second-half receiving team	Leave on *Auto*. It's used automatically at halftime.

The grey summary under the fields restates the result in plain English — read it before saving. Press **Save Coin Toss**.

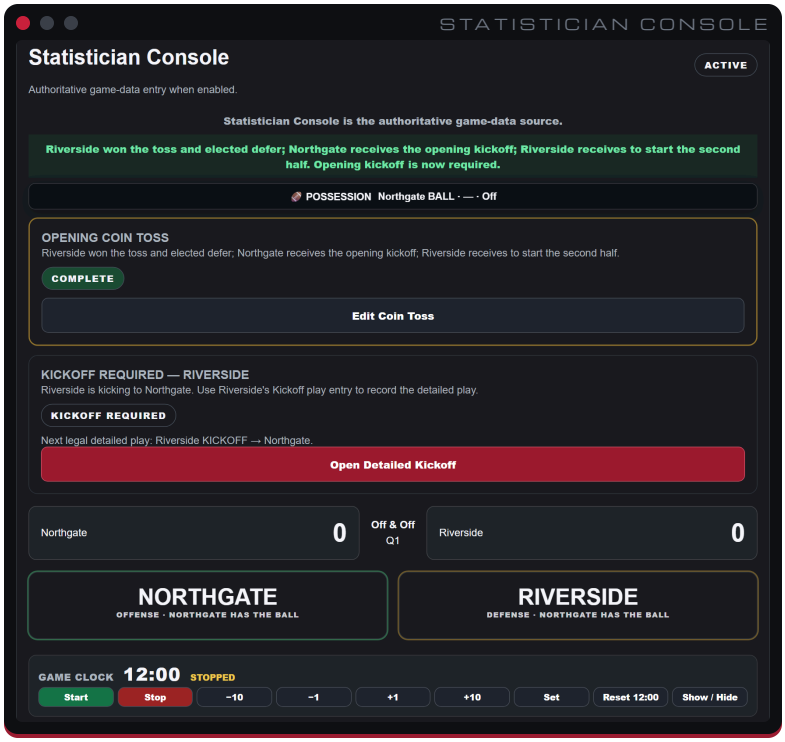

FIG 6 After saving: the coin toss reads COMPLETE, the green notice confirms who kicks and who receives each half, and a KICKOFF REQUIRED panel appears. The Run/Pass buttons stay hidden until the kickoff is entered.

MADE A MISTAKE ON THE TOSS?

Edit Coin Toss stays available until the first play is recorded.

PHASE 2

2 The Opening Kickoff

Every kick — kickoff, free kick, punt — uses the same play form: a kicker, a returner, and three spots on the field.

In the **KICKOFF REQUIRED — RIVERSIDE** panel, press **Open Detailed Kickoff**. The kickoff play form opens with the kicking team already chosen.

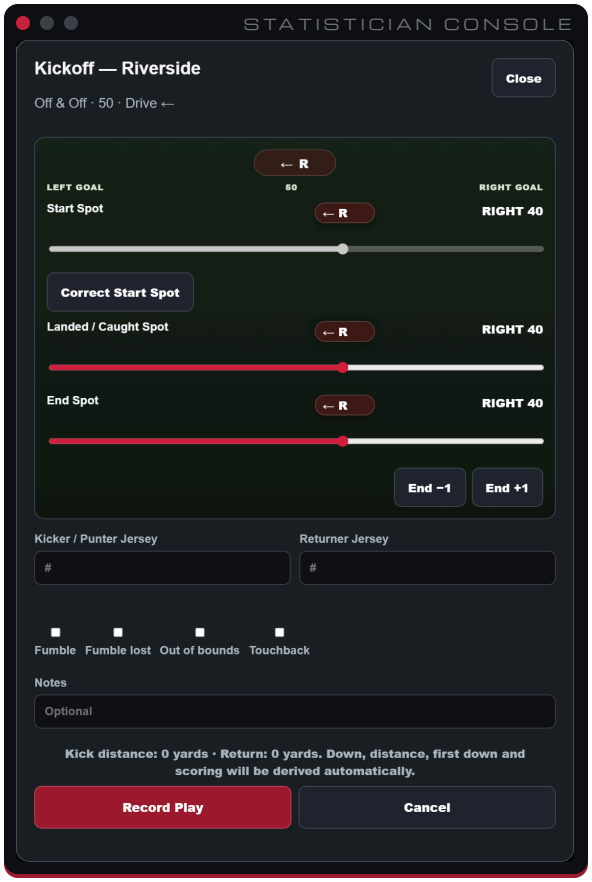

FIG 7 The kickoff form as it opens. Riverside kicks from RIGHT 40, driving ←.

Title & context line	*Kickoff — Riverside*, then the current down, ball spot and drive direction.
Drive badge ← R	Riverside is driving toward the LEFT goal.
Start Spot	Where the ball was kicked from. Filled in and locked. Use **Correct Start Spot** only if it's genuinely wrong (e.g. after a kickoff penalty).
Landed / Caught Spot	Where the kick was caught or first touched. Drag the slider.
End Spot	Where the return ended (ball dead). Drag the slider; **End −1** / **End +1** fine-tune one yard at a time.
Kicker / Punter Jersey	Kicking team's jersey number.
Returner Jersey	Receiving team's jersey number.
Checkboxes	**Fumble**, **Fumble lost**, **Out of bounds**, **Touchback**. Tick only what happened.
Notes	Optional free text.
Preview line	Live calculation, e.g. *Kick distance: 55 yards · Return: 25 yards.*

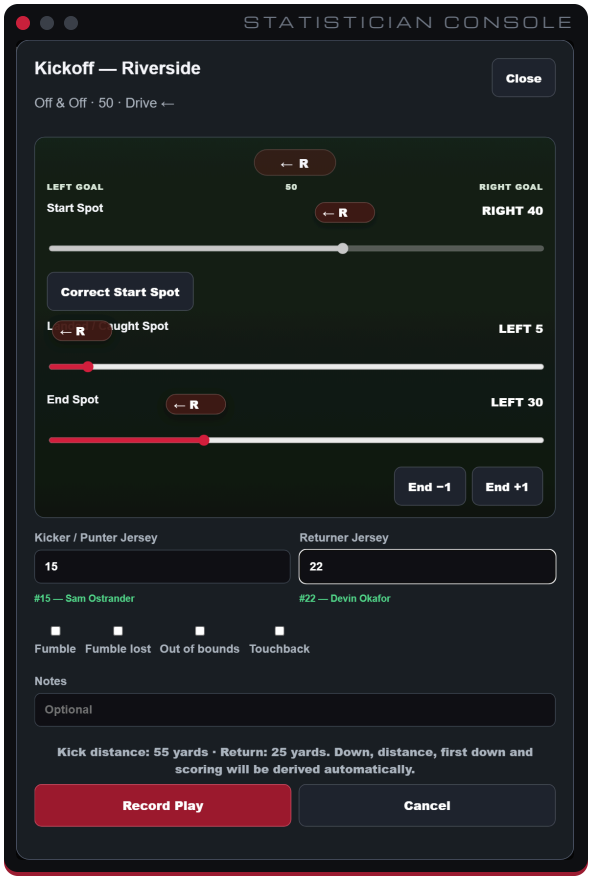

FIG 8 Filled in: lands at LEFT 5, returned by #22 to LEFT 30.

ENTERING THE KICK

1. Type the kicker's number (**15**) in **Kicker / Punter Jersey**.
2. Type the returner's number (**22**) in **Returner Jersey**. Watch the line under the box: **#22 — Devin Okafor** in green means the player was found on Northgate's roster.
3. Drag **Landed / Caught Spot** to where it was fielded — `LEFT 5`.
4. Drag **End Spot** to where the returner went down — `LEFT 30`.
5. Check the preview: *Kick distance: 55 yards · Return: 25 yards.* Press **Record Play**.

TOUCHBACK?

Drag Landed to the end zone and tick **Touchback**; the system places the ball at the 20 (Phase 5 shows one).

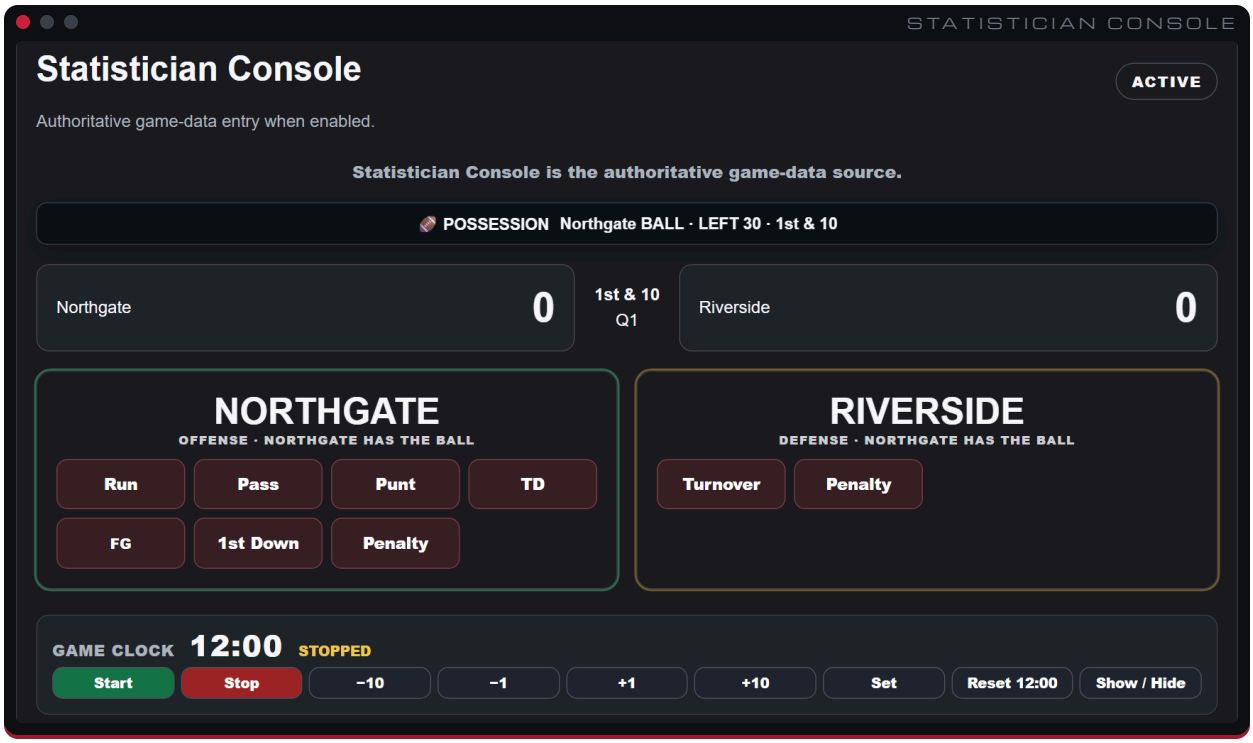

FIG 9 After the kickoff: "Play recorded.", the special panel is gone, Northgate is on offense (green card) with 1st & 10 at LEFT 30, and the play buttons have appeared.

PHASE 3

3 Live Play Entry: The 1st Quarter

Runs, passes (complete, incomplete, sack, interception), penalties, the clock, fumbles and punts — each shown with the form, then the result.

Picking the right button

Always use the buttons on the card of the team that **had the ball when the play started** (green outline, OFFENSE). The one exception is **Penalty**: use it on the card of the team that **committed** the foul. The defense card only offers **Turnover** and **Penalty**.

Run

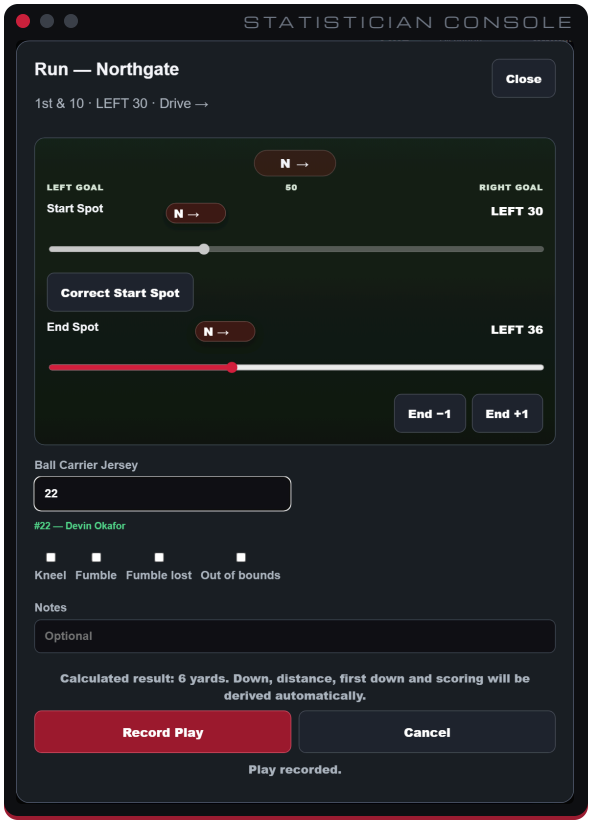

FIG 10 Run — Northgate. #22 resolves to Devin Okafor; End Spot dragged to LEFT 36.

1. On the offense card press **Run**.
2. Type the ball carrier in **Ball Carrier Jersey**. Look for the green name.
3. Drag **End Spot** to where the runner was downed. The preview says *Calculated result: 6 yards.*
4. Tick **Out of bounds** if he went out (it stops the clock), **Kneel** for a victory-formation kneel, or **Fumble**/**Fumble lost** if the ball came out (shown later in this phase).
5. Press **Record Play**.

The form closes and the screen shows **Play recorded.** The down, distance and ball spot update on their own.

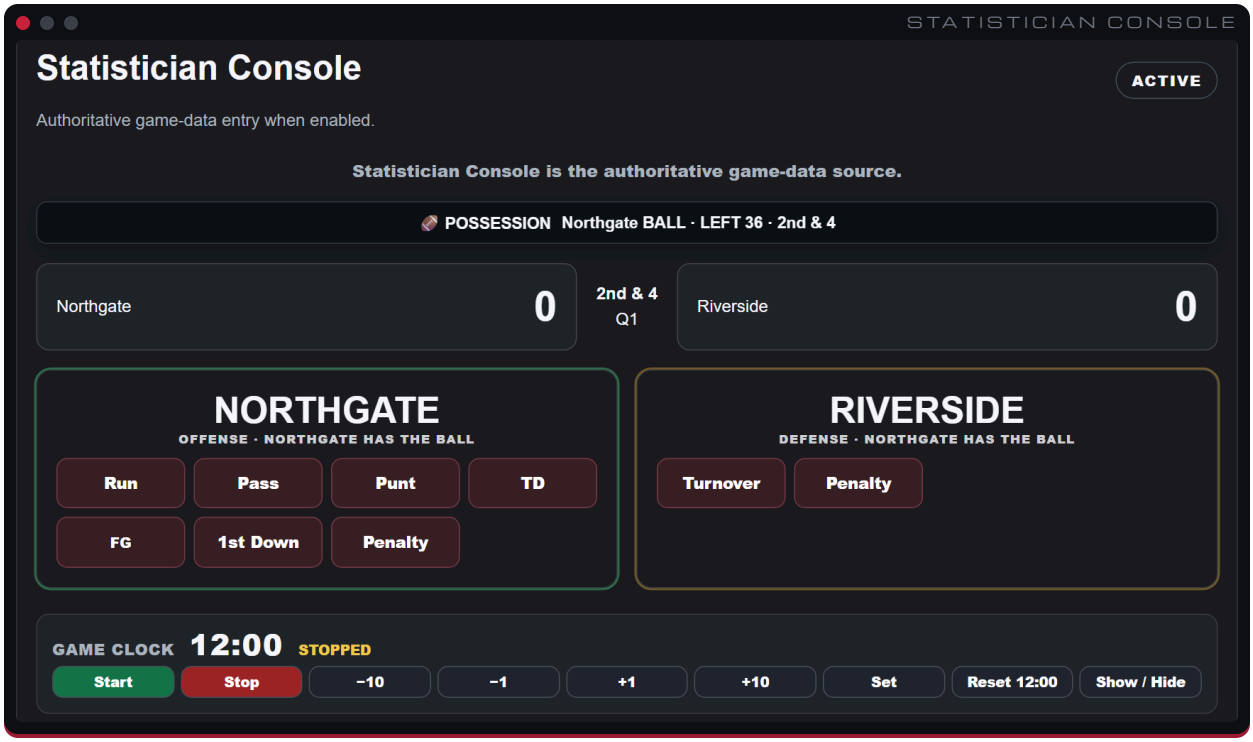

FIG 11 After a 6-yard run: 2nd & 4 at LEFT 36. You didn't type the down or the distance — the system did.

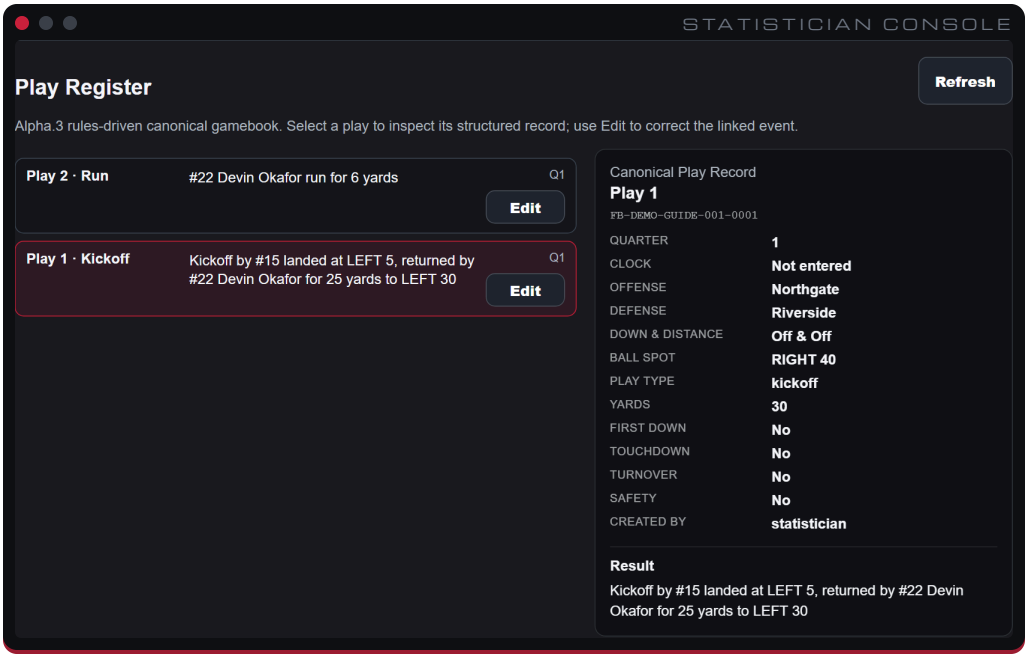

FIG 12 The Play Register at the bottom of the console lists each play, newest first. Tap a play to see its full record on the right; Edit is for corrections later.

Fixing a mistake right away: Undo Last Event

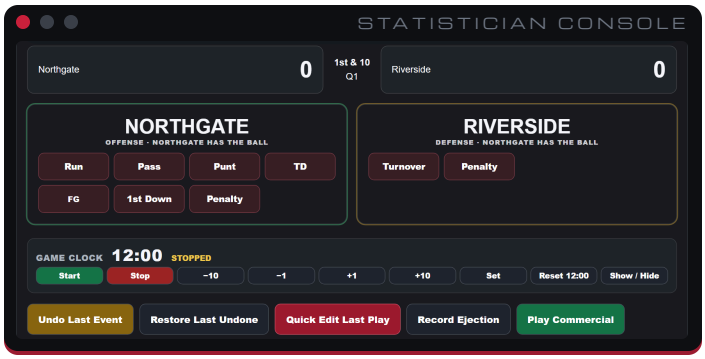

FIG 13 Oops — the end spot was dragged too far, giving a bogus first down.

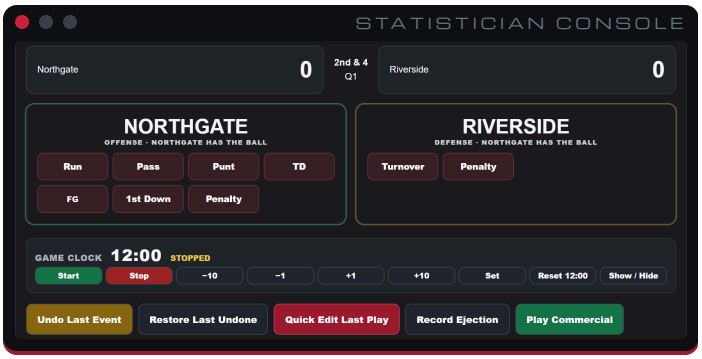

FIG 14 After Undo Last Event: the play is removed and the down, distance and spot are restored.

Undo Last Event reverses the most recent play or event completely, including any score or possession change it caused. Your browser first asks *"Undo this: …?"* naming the play — check it's the right one and press **OK**. Then simply enter the play again. **Restore Last Undone** brings back something you undid by accident. **Quick Edit Last Play** opens the last play's correction form — see **Ball in the wrong place?** at the end of this phase.

UNDO ONLY THE MOST RECENT PLAY

Undo always removes the *latest* event. If the mistake was several plays ago, don't undo a string of good plays to reach it. Use that play's **Edit** button in the Play Register instead (see **Ball in the wrong place?** at the end of this phase).

Pass – complete

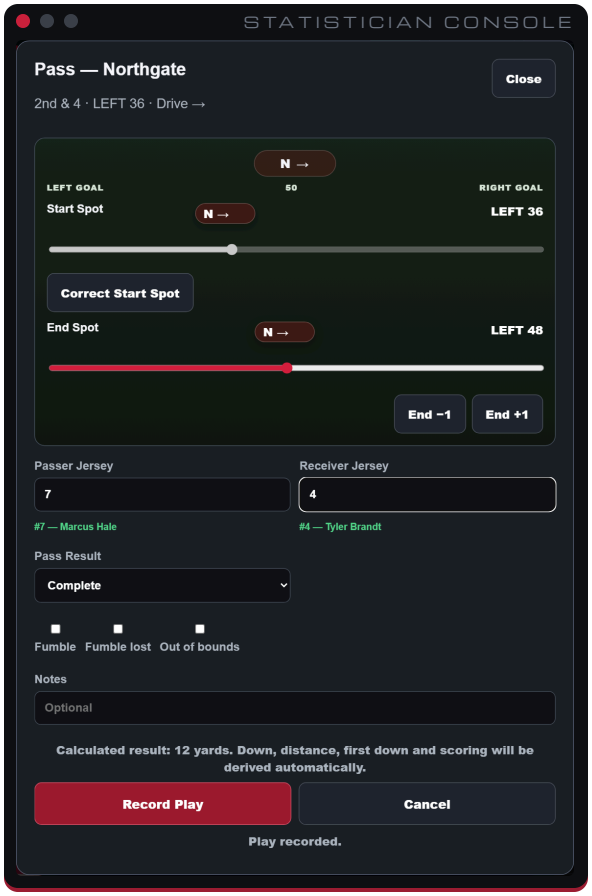

FIG 15 Pass — complete from #7 to #4, ending at LEFT 48.

Passer Jersey	The quarterback (or whoever threw it).
Pass Result	**Complete**, **Incomplete**, **Interception**, **Sack** or **Spike**. The form changes to match: different jersey boxes appear for each.
Receiver Jersey	Who caught it (or, for an incomplete pass, who it was thrown to).
End Spot	Where the receiver was downed — not where he caught it.

Press **Record Play**. This 12-yard gain passes the line to gain, so the system awards a first down automatically.

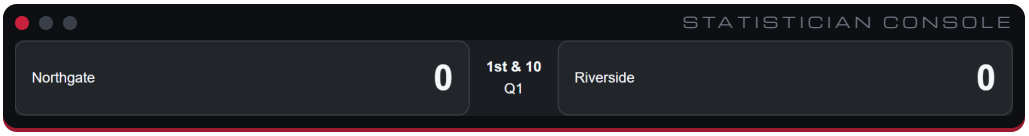

FIG 16 1st & 10 at LEFT 48 after the 12-yard completion.

Pass – incomplete

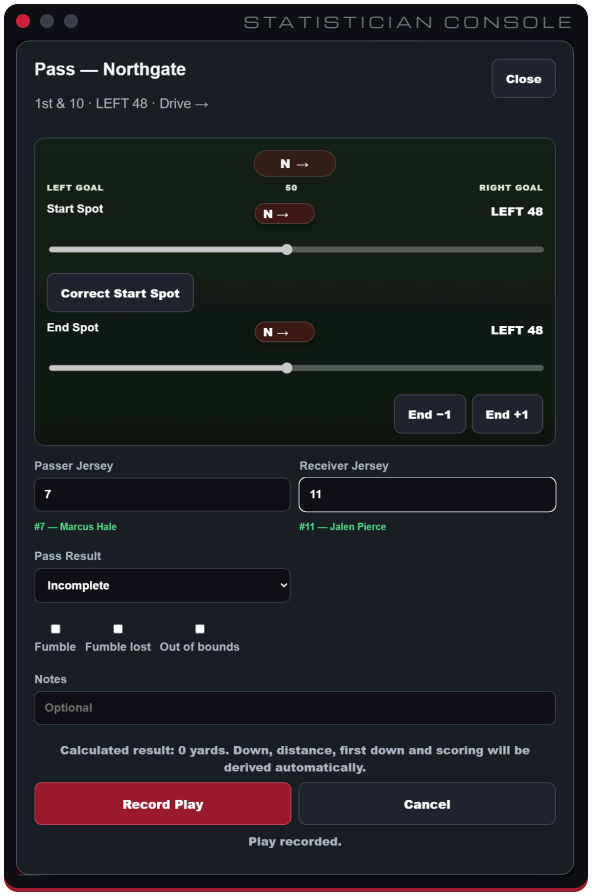

FIG 17 Incomplete: the End Spot slider locks to the line of scrimmage.

Set **Pass Result** to **Incomplete**. The End Spot locks, because the ball returns to where the play started. Enter the passer and the intended receiver, then **Record Play**.

Result: 2nd & 10, same spot, clock stopped.

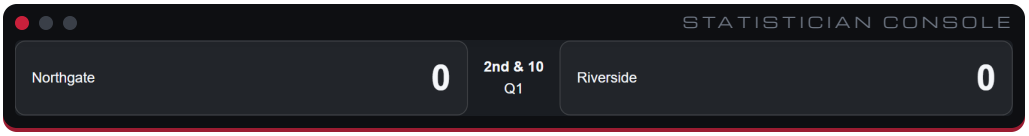

FIG 18 Down advances, distance and spot unchanged.

Pass – sack

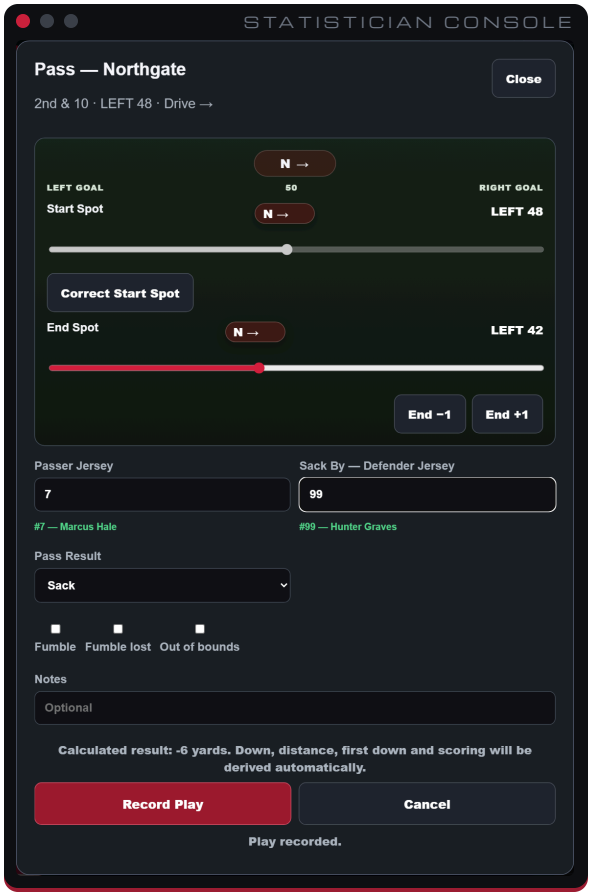

FIG 19 Sack: the Receiver box is replaced by Sack By — Defender Jersey.

Set **Pass Result** to **Sack**. Type the defender who made the sack in **Sack By — Defender Jersey** (it resolves against the *defense's* roster: #99 Hunter Graves). Drag End Spot back to where the QB went down (LEFT 42), then **Record Play**.

Result: 3rd & 16 at LEFT 42 (a 6-yard loss). The sack is credited to #99 and counted as a sack, not a pass attempt.

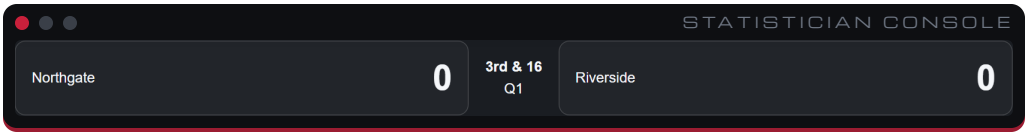

FIG 20 3rd & 16 after the sack.

Penalty

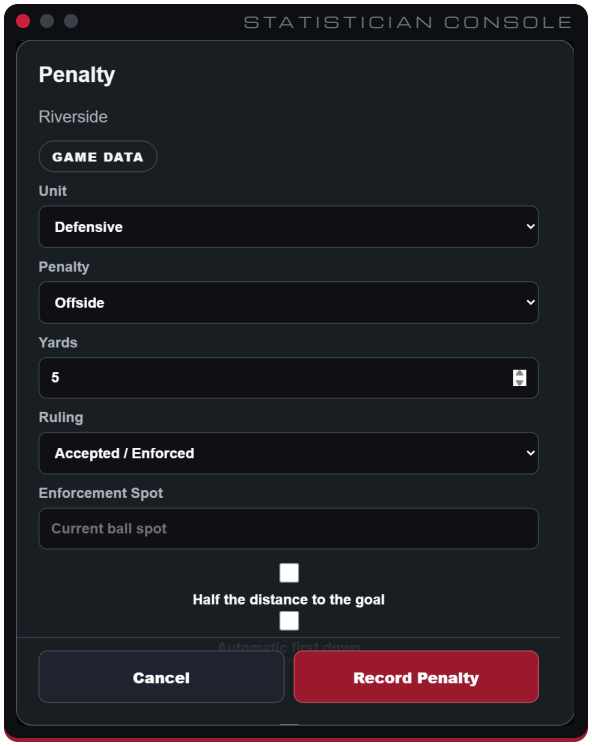

FIG 21 Penalty on Riverside (pressed on the Riverside card): Defensive Offside, 5 yards.

Unit	Offensive, Defensive, Special Teams, or General / Other. Pre-set from the button you pressed.
Penalty	Pick the foul from the list. Choosing one fills in its standard yardage.
Yards	Change only if the officials marked off a different distance.
Ruling	**Accepted / Enforced**, **Declined**, **Offsetting Penalties**, or **Flag Picked Up**.
Enforcement Spot	Leave blank to enforce from the current ball spot.
Checkboxes	**Half the distance**, **Automatic first down**, **Loss of down**, **Retry down**, **Untimed down**. Common ones tick themselves (e.g. automatic first down for defensive holding).

Press **Record Penalty**. The ball moves and the down/distance updates.

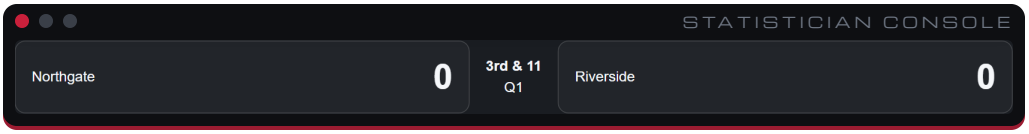

FIG 22 Riverside offside: 3rd & 16 becomes 3rd & 11 at LEFT 47.

The game clock – and timeouts

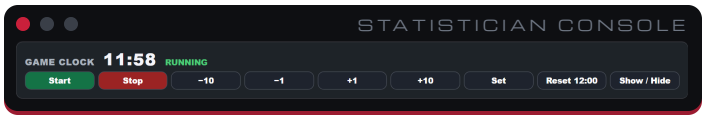

FIG 23 Start runs the clock (shows RUNNING).

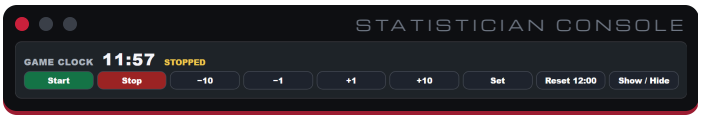

FIG 24 Stop freezes it (shows STOPPED).

Start / **Stop**	Run and stop the game clock to match the stadium clock.
−10 **−1** **+1** **+10**	Nudge the clock by seconds to match the stadium clock.
Set	Type an exact time.
Reset 12:00	Back to a full 12-minute quarter.
Show / Hide	Shows or hides the clock on the broadcast graphic.

THERE IS NO TIMEOUT BUTTON

This version of the Statistician Console does not record timeouts. When a team calls timeout, press **Stop** so the clock matches the stadium, then carry on. If your producer wants timeouts noted, type *"Timeout Riverside"* in the **Notes** box of the next play.

Interception

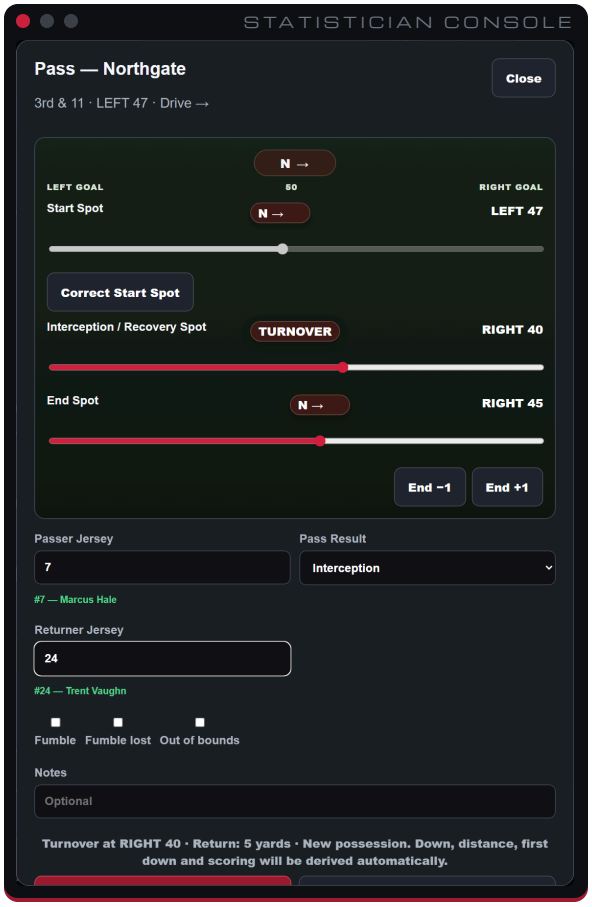

FIG 25 Interception: picked at RIGHT 40 by #24, returned to RIGHT 45.

Set **Pass Result** to **Interception**. Two new things appear: an **Interception / Recovery Spot** slider and the **Returner Jersey** box (the defender who picked it off).

1. Passer Jersey: **7**.
2. Drag **Interception / Recovery Spot** to where the ball was caught (`RIGHT 40`).
3. Returner Jersey: **24** (Riverside's Trent Vaughn).
4. Drag **End Spot** to where the return ended (`RIGHT 45`).
5. The preview reads *Turnover at RIGHT 40 · Return: 5 yards · New possession.* **Record Play**.

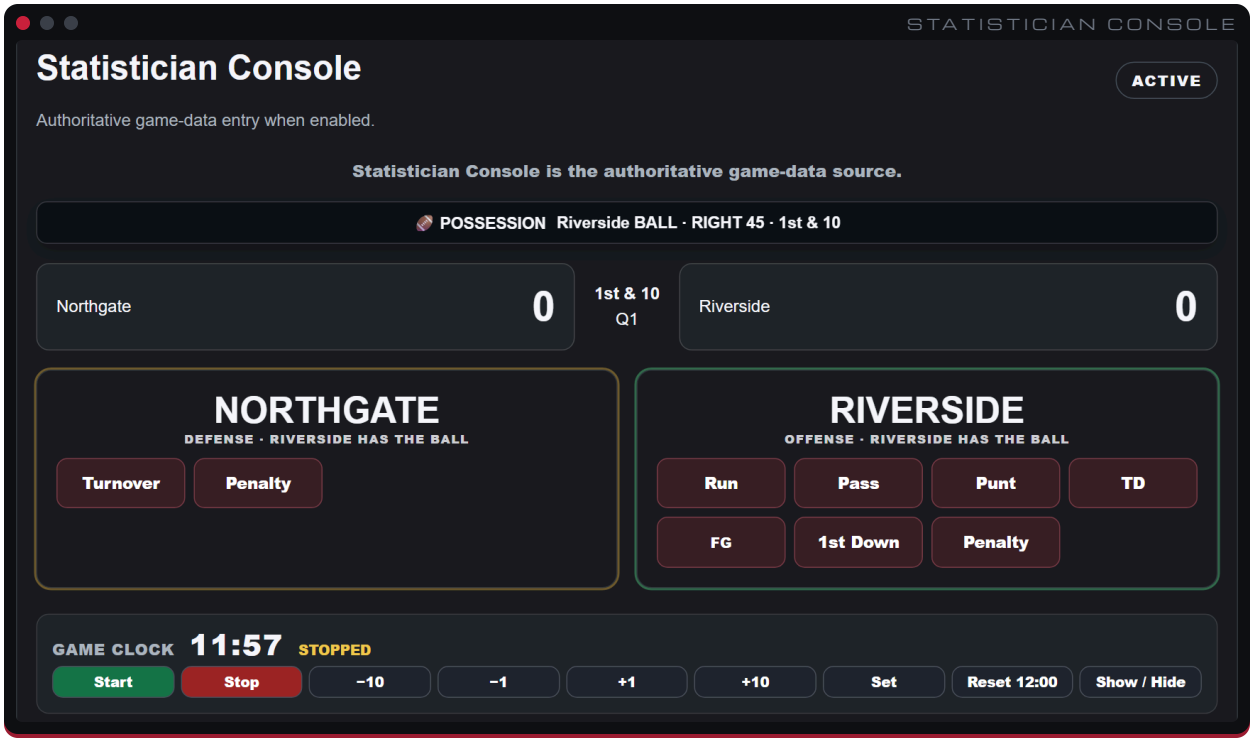

FIG 26 After the interception: Riverside is now on offense (green card), 1st & 10 at RIGHT 45, driving ←. The cards swapped their buttons automatically.

Fumble

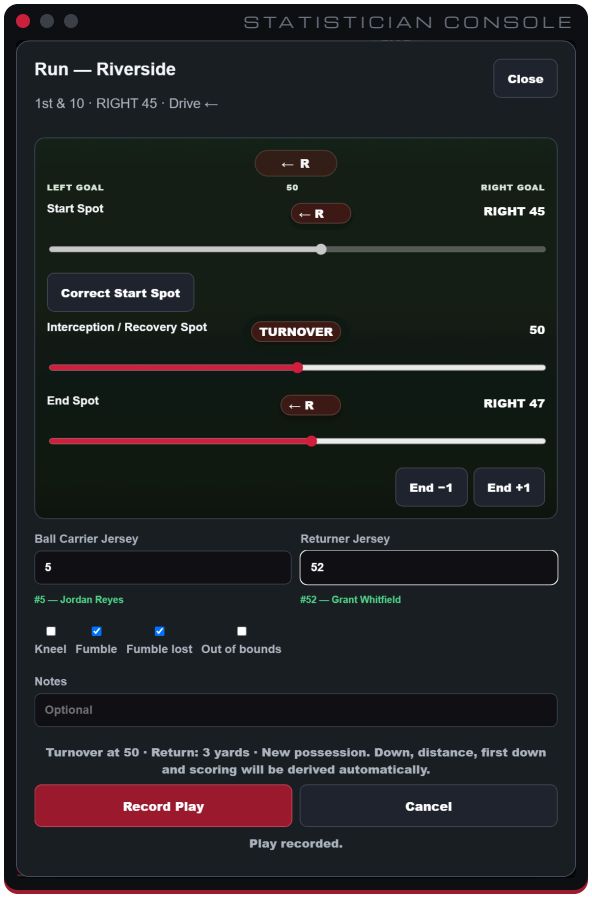

FIG 27 Riverside run, fumble lost: Northgate #52 recovers at the 50 and returns to RIGHT 47.

Fumbles are entered on the play they happened on (here a **Run** by Riverside #5).

Fumble	The ball came out, but the *same* team kept it. A **Fumble Recovered By — Teammate** box appears if someone else on offense recovered.
Fumble lost	The *other* team recovered. Ticking it also ticks Fumble.
Interception / Recovery Spot	Where the defense recovered (`50`).
Returner Jersey	The defender who recovered (**52**).
End Spot	Where the recovery return ended (`RIGHT 47`).

Result: possession flips to Northgate, 1st & 10 at RIGHT 47.

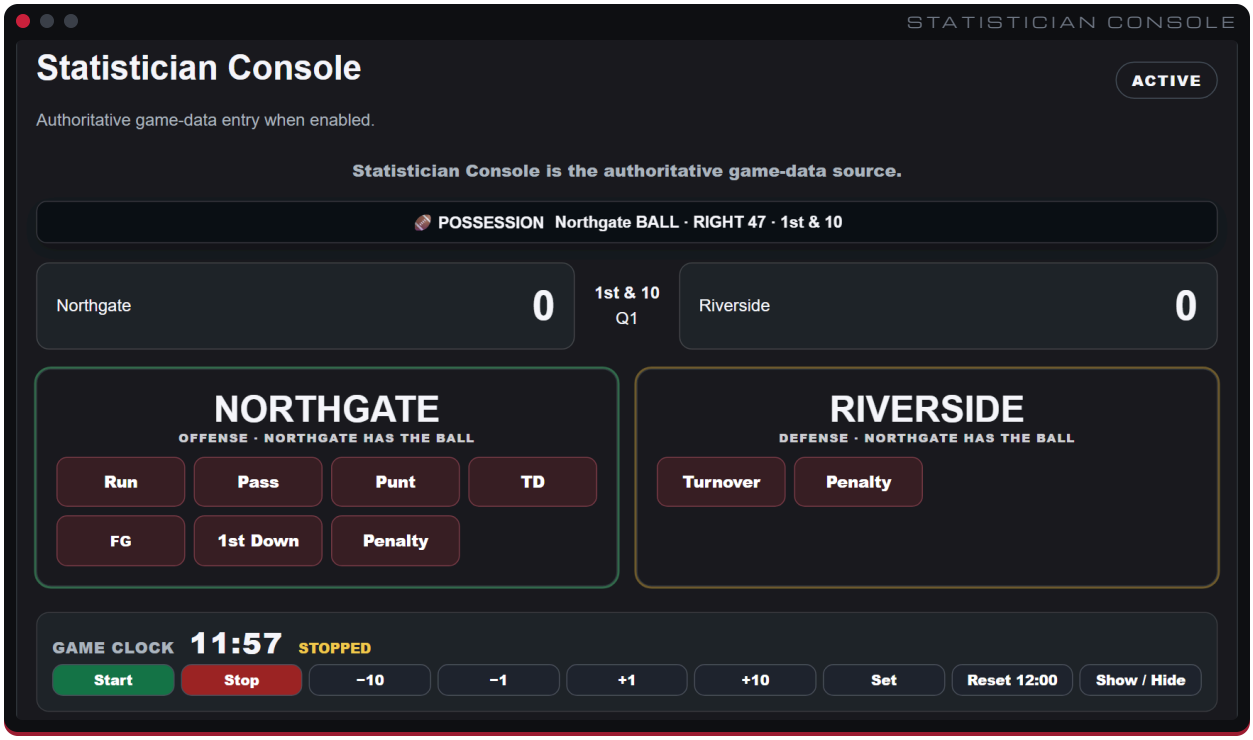

FIG 28 After the lost fumble: Northgate's ball again.

Punt

Press **Punt** on the kicking team's card. It's the same form as a kickoff (punter, Landed / Caught Spot, returner, End Spot), plus punt-only result boxes. Tick the one that describes how the punt ended, or none for an ordinary return.

Downed by kicking team	The kicking team touched the ball down (or it rolled dead) before anyone returned it. No returner; the play ends where it landed.
Fair catch	Returner signalled for a fair catch — ball is dead where caught. No return.
Touchback	Into the end zone; ball to the 20.
Muffed punt — kicking team recovered	Returner muffed it and the kicking team got it back.
Blocked	The punt was blocked.

Downed, Fair catch, Touchback and Muffed punt can't be combined: ticking one clears the others.

PUNT DOWNED BY THE KICKING TEAM

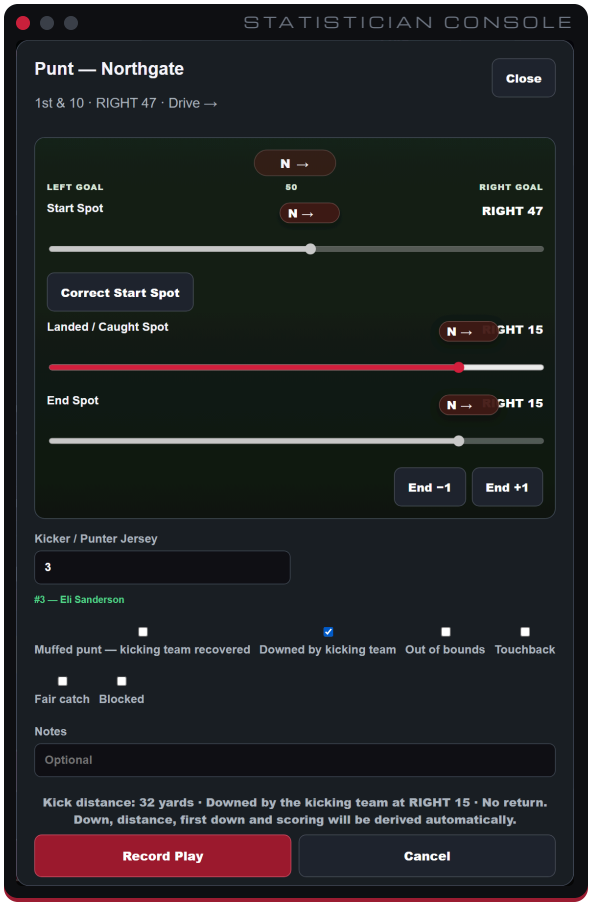

FIG 29 Northgate #3 punts from RIGHT 47; it's downed at RIGHT 15. Downed by kicking team is ticked.

1. Type the punter in **Kicker / Punter Jersey** (**3**).
2. Drag **Landed / Caught Spot** to where the ball was downed (`RIGHT 15`).
3. Tick **Downed by kicking team**. The Returner box disappears, and **End Spot** snaps to the landed spot and locks — there's no return to enter.
4. Check the preview: *Kick distance: 32 yards · Downed by the kicking team at RIGHT 15 · No return.* Press **Record Play**.

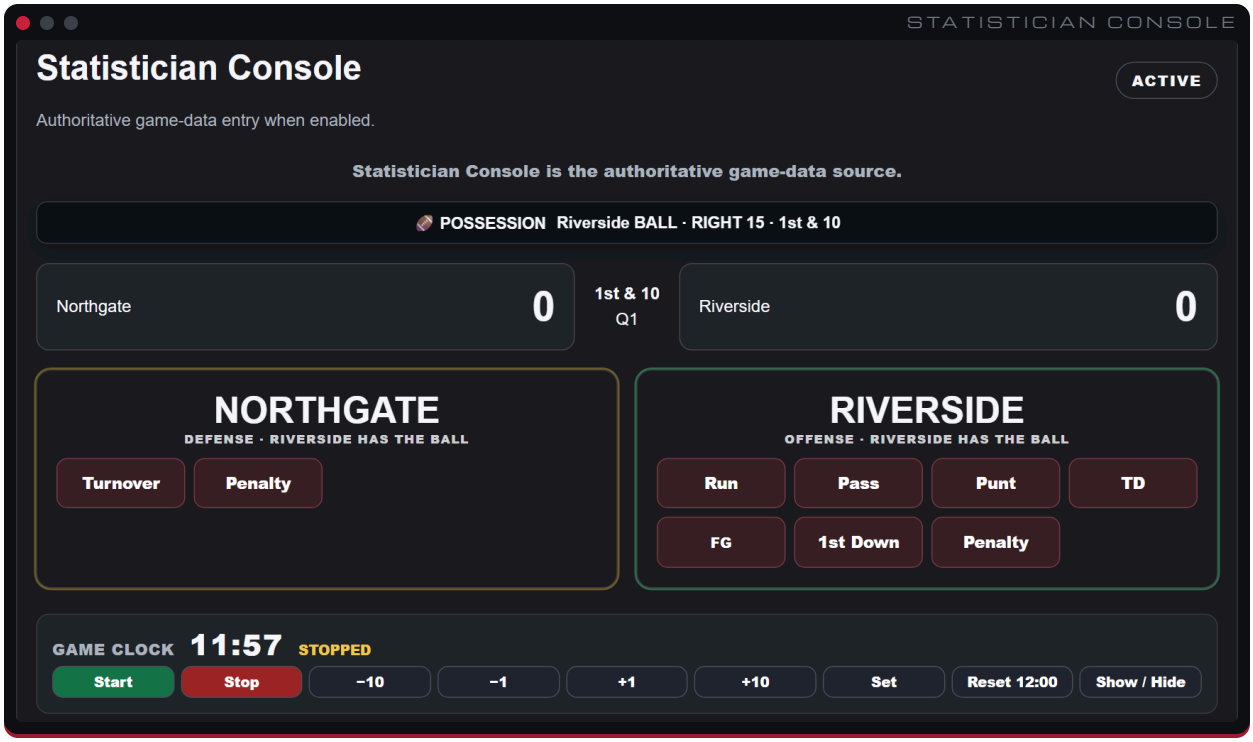

FIG 30 After the downed punt: Riverside ball, 1st & 10 at RIGHT 15. The register reads *"Punt by #3 landed at RIGHT 15, downed by the kicking team."*

PUNT WITH A RETURN

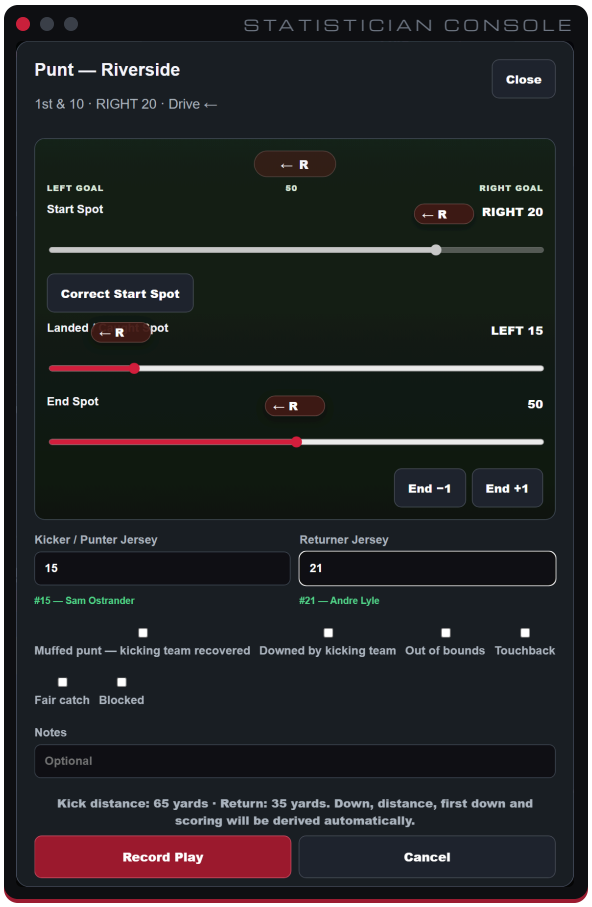

FIG 31 A returned punt (from the 4th quarter): lands at Northgate's 15, #21 returns it to the 50.

Leave all the result boxes unticked. Enter the returner's jersey and drag **End Spot** to where the return ended. The preview shows the kick distance and the return yards separately.

Reading the Play Register

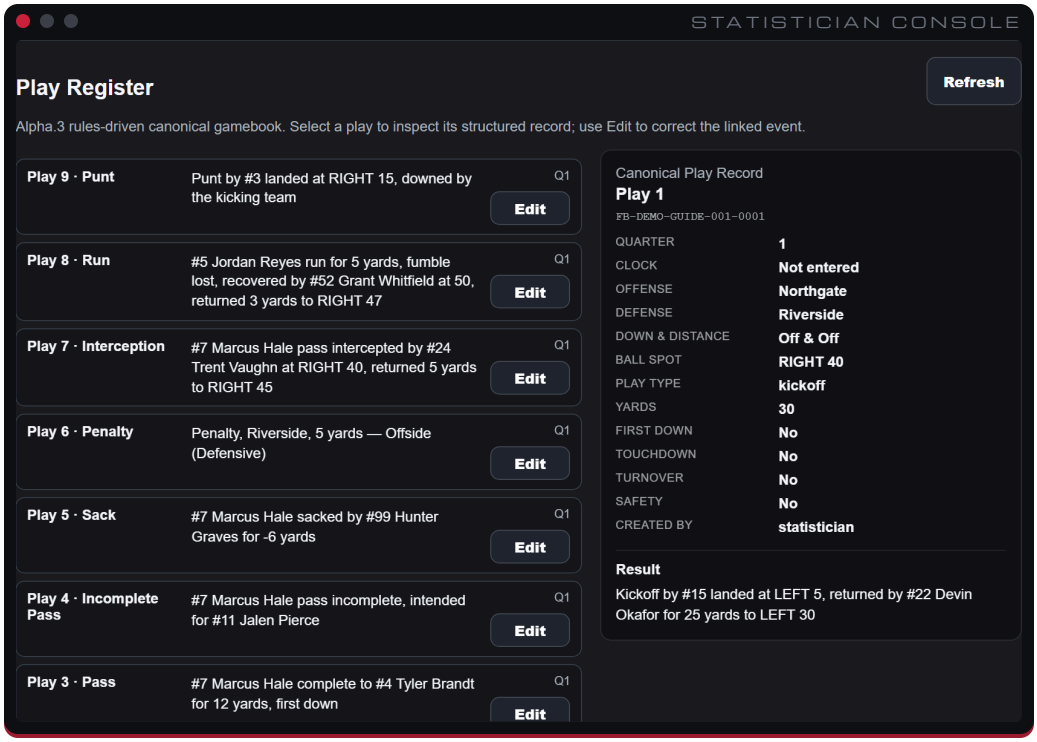

FIG 32 The 1st-quarter register, newest first. Each row has the play type on the left and a plain-English description: *pass incomplete, intended for #11*; *sacked by #99 Hunter Graves*; *pass intercepted by #24 Trent Vaughn*; *fumble lost, recovered by #52*; *downed by the kicking team*.

USE THE REGISTER AS YOUR CHECK

Glance at the newest row after each play. If the description doesn't match what happened on the field, fix it right away with **Undo Last Event** or **Quick Edit Last Play**.

The other buttons on the cards

Button	When to use it
TD	Rarely needed. Normal touchdowns score automatically when a Run/Pass End Spot reaches the end zone (Phase 5). Use only if your producer asks you to log a touchdown without a play.
FG	Field goal attempts — made, missed or blocked (Phase 5).
Turnover	A turnover that isn't part of a play you entered (e.g. a turnover on downs correction). Interceptions and fumbles normally go in the Pass/Run form as shown above.
1st Down	Manual first-down marker. Normal first downs are automatic; use only to correct a measurement.
Record Ejection	Logs an ejected player or coach. Ejected players can't be credited on later plays.
Play Commercial	Plays the next sponsor ad. Only if your producer asks you to run commercials.

Ball in the wrong place?

The ball spot drives everything: yards, first downs, touchdowns and safeties are all measured from it. If the screen's spot doesn't match where the officials put the ball, fix it before the next snap. Which tool you use depends on *why* it's wrong:

Situation	Use	Shown below
You just recorded a play and dragged the End Spot to the wrong place	**Quick Edit Last Play** (or **Undo Last Event** and re-enter)	Fix 1
No play is wrong, but the officials spotted the ball somewhere else (re-spot, measurement, inadvertent whistle)	**Field Position** slider	Fix 2
You're already in the next play's form and the Start Spot is wrong	**Correct Start Spot**	Fix 3
The bad spot (or jersey) was several plays ago	**Edit** on that play in the Play Register. Same form as Fix 1	Fix 1, and Phase 10

FIX 1 — QUICK EDIT LAST PLAY

Here Riverside's #5 actually ran from RIGHT 15 to RIGHT 27 (12 yards, a first down), but the End Spot was left at RIGHT 17. The screen now shows 2nd & 8 at RIGHT 17.

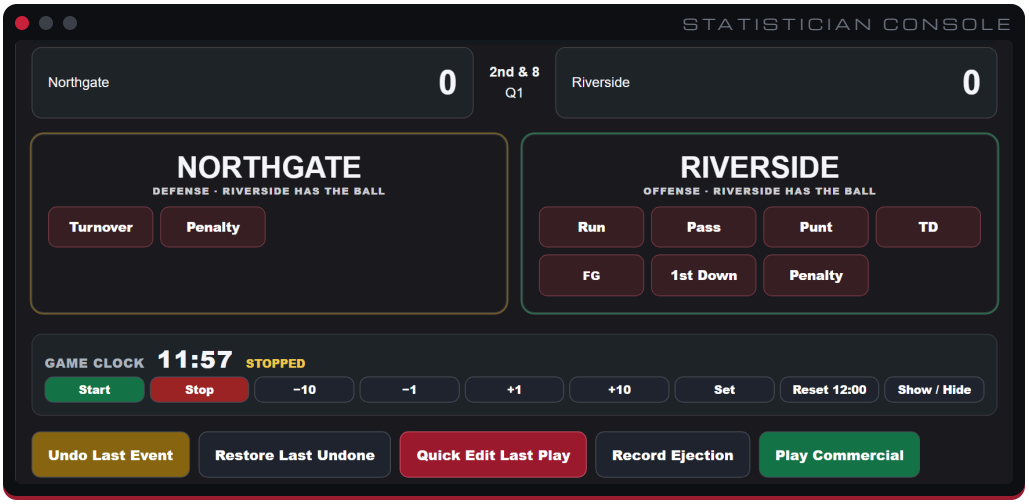

FIG 33 The mis-keyed play: 2nd & 8 at RIGHT 17 instead of 1st & 10 at RIGHT 27.

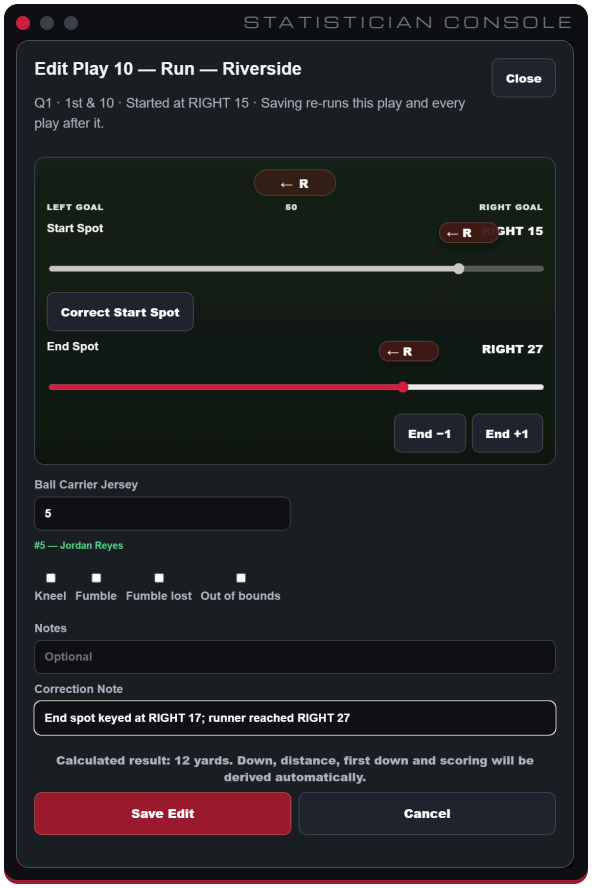

FIG 34 Edit Play 10 — Run — Riverside: the normal play form, filled in with what you entered. End Spot dragged to RIGHT 27, with a correction note.

Editing a play opens the **same form you used to record it**, filled in with everything you entered: jerseys, spots, pass result and checkboxes. The title reads *Edit Play …* and the button reads **Save Edit**.

1. Press **Quick Edit Last Play** in the action bar.
2. Change whatever was wrong. Here, drag **End Spot** to `RIGHT 27`. You can also fix a jersey, the pass result or a checkbox.
3. Optionally type what you fixed in **Correction Note**.
4. Press **Save Edit**.

That's it. Saving re-runs this play **and every play after it** through the rules, so the yards, down & distance, first downs, scoring, the register description and player stats all recalculate. You don't retype anything else.

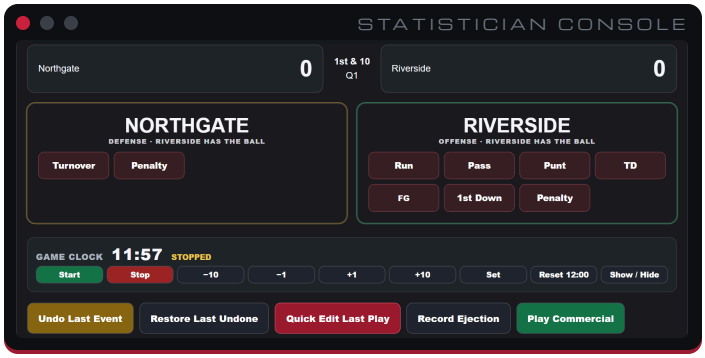

FIG 35 After Save Edit: 1st & 10 at RIGHT 27. The notice reads *Play edited — later plays re-calculated.*

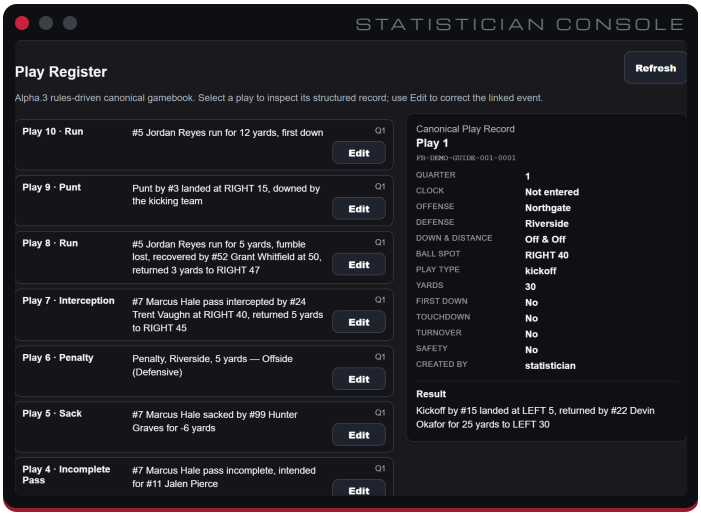

FIG 36 The register now reads *#5 Jordan Reyes run for 12 yards, first down.*

EDITING AN OLDER PLAY

Every row in the Play Register has an **Edit** button that opens the same form for that play. Saving re-runs it and every later play. Later plays keep the end spots you gave them (where the ball really was), so the next play's start follows your fix and only its yards change.

SOME EDITS ARE REFUSED – ON PURPOSE

If an edit would change who had the ball, or the try/kickoff sequence, under plays that came after it (for example turning an old play into a touchdown when the drive actually continued), **Save Edit** is refused with a message naming the play, and nothing changes. Fix those from the latest play backwards with **Undo Last Event**, or leave it for your producer. Touchdowns, field goals, tries, penalties and turnovers entered with their own buttons still use a simpler edit form.

FIX 2 — THE OFFICIALS SPOTTED IT SOMEWHERE ELSE

Your entry was right, but the ball ends up elsewhere: the officials re-spot it, a measurement moves it, or a whistle kills the play early. In this example the officials place the ball one yard back, at RIGHT 26.

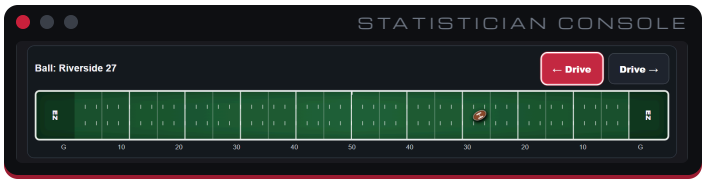

FIG 37 Before: Ball: Riverside 27.

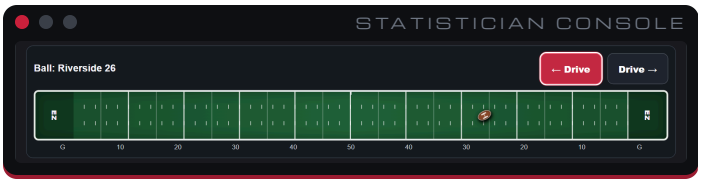

FIG 38 After dragging the ball one yard back: Ball: Riverside 26.

1. Scroll to **Field Position**. The **Ball:** label names whose end of the field the ball is in.
2. Drag the football on the green field to the officials' spot and let go. The spot saves when you release.
3. Check **Down & Distance**. The slider keeps the current down and distance. If the line to gain didn't move (it usually doesn't), pick the new distance in the distance dropdown, e.g. 2nd & 6 becoming 2nd & 7.

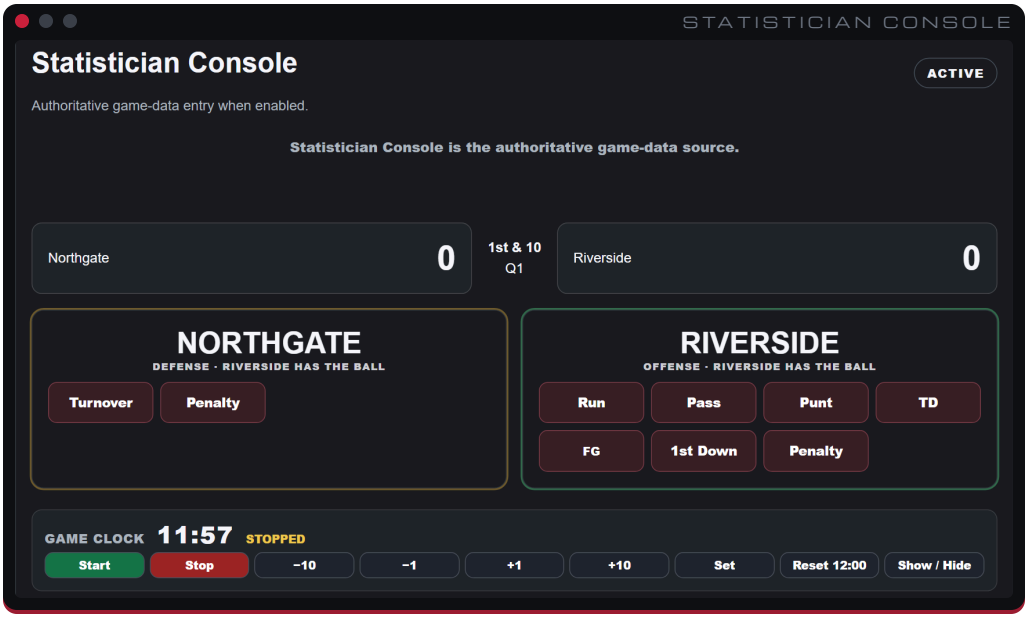

FIG 39 The POSSESSION strip and Game Context now show RIGHT 26.

FIX 3 — CORRECT START SPOT INSIDE A PLAY FORM

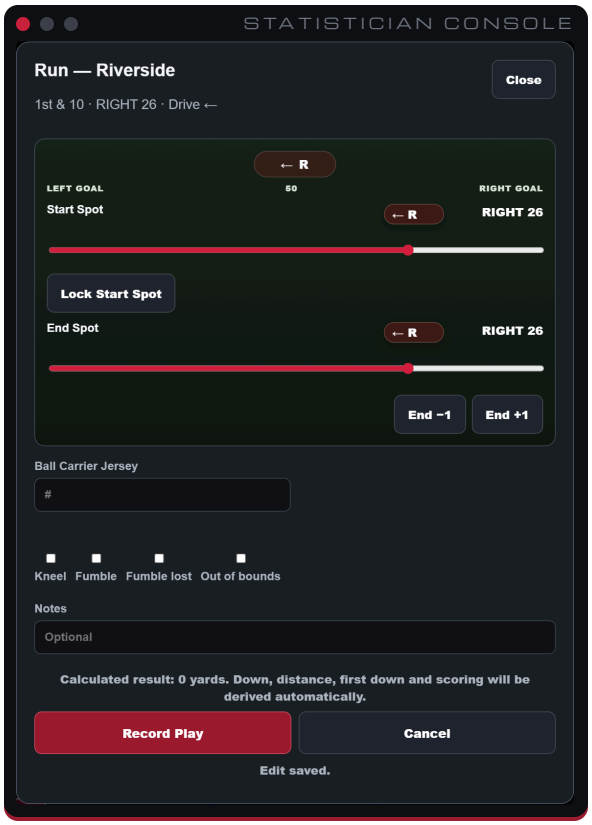

FIG 40 Correct Start Spot pressed: the Start Spot slider is unlocked and the button reads Lock Start Spot.

If you open **Run**, **Pass** or **Punt** and notice the **Start Spot** is wrong, you don't have to cancel. Press **Correct Start Spot**, drag the Start Spot to the real line of scrimmage, press **Lock Start Spot**, then enter the play as normal. Yards are measured from the corrected start.

This changes only the start of the play you're entering. It doesn't change the down or the distance, so if the spot moved because of something the officials did, Fix 2 is usually the better choice.

PHASE 4

4 Jerseys That Don't Match (Unresolved Players)

Sometimes the number you see isn't on that team's roster — a wrong number on the roster, a blank roster entry, a player wearing a different jersey, or just a misread. Here's exactly what happens, and what to do: keep going.

Case 1: the number belongs to the other team

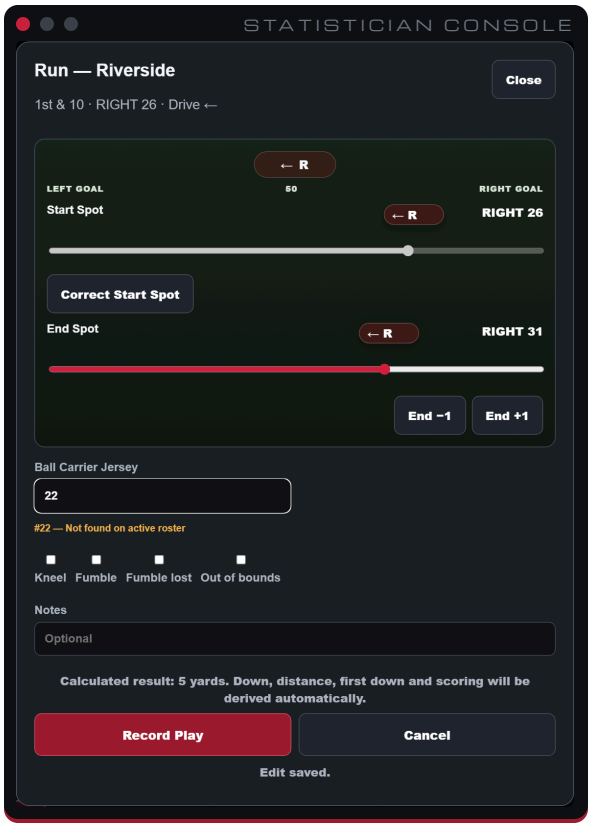

FIG 41 Riverside run, ball carrier #22. Riverside has no #22 (it's a Northgate number).

As soon as you type the number, the line under the box turns **amber**: *"#22 — Not found on active roster."* The form checks only the team that had the ball, so it never borrows the other team's #22.

Press Record Play anyway. The play records normally: yards, down and distance all update. The jersey is saved as just *#22* with no name, and the system flags the play internally as a **team mismatch** so it can be corrected after the game. It will **not** credit Northgate's #22 by mistake.

> STALE MESSAGE
>
> The "Play recorded." under the buttons in this screenshot is left over from the previous play — ignore it.

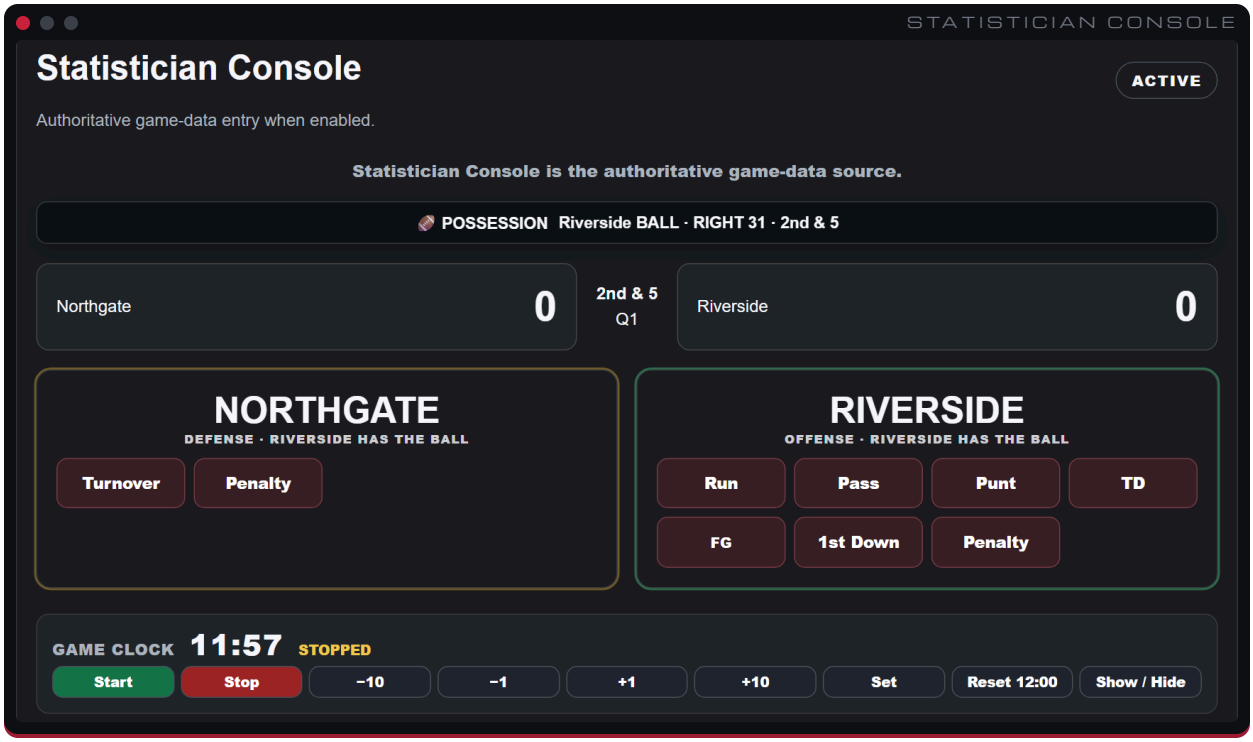

FIG 42 After recording: 2nd & 5 at RIGHT 31. The game moved on exactly as it should.

Case 2: the number isn't on anyone's roster

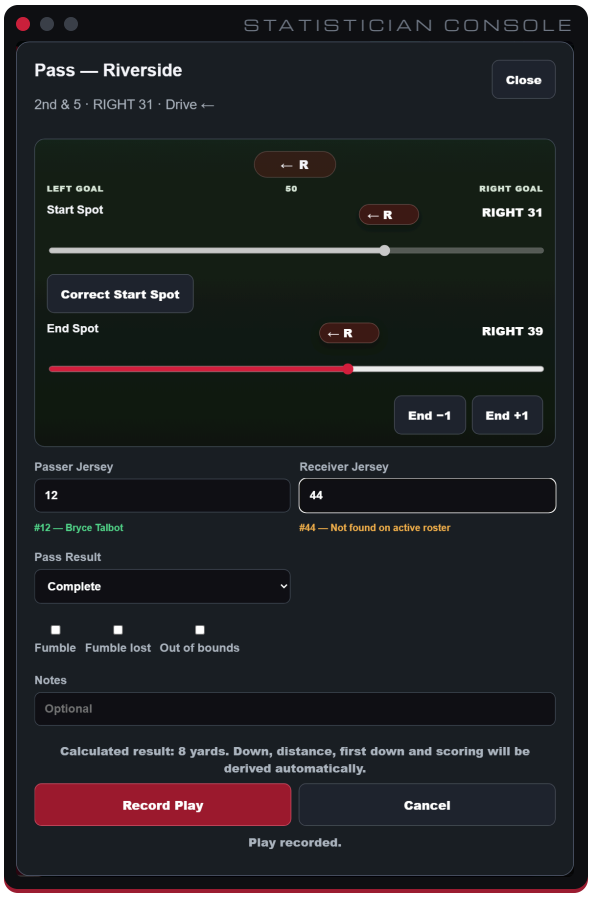

FIG 43 Riverside pass to #44, a number on neither roster.

Exactly the same treatment: amber “Not found on active roster,” record it anyway. The completion and yardage count for the team; only the receiver's name is missing.

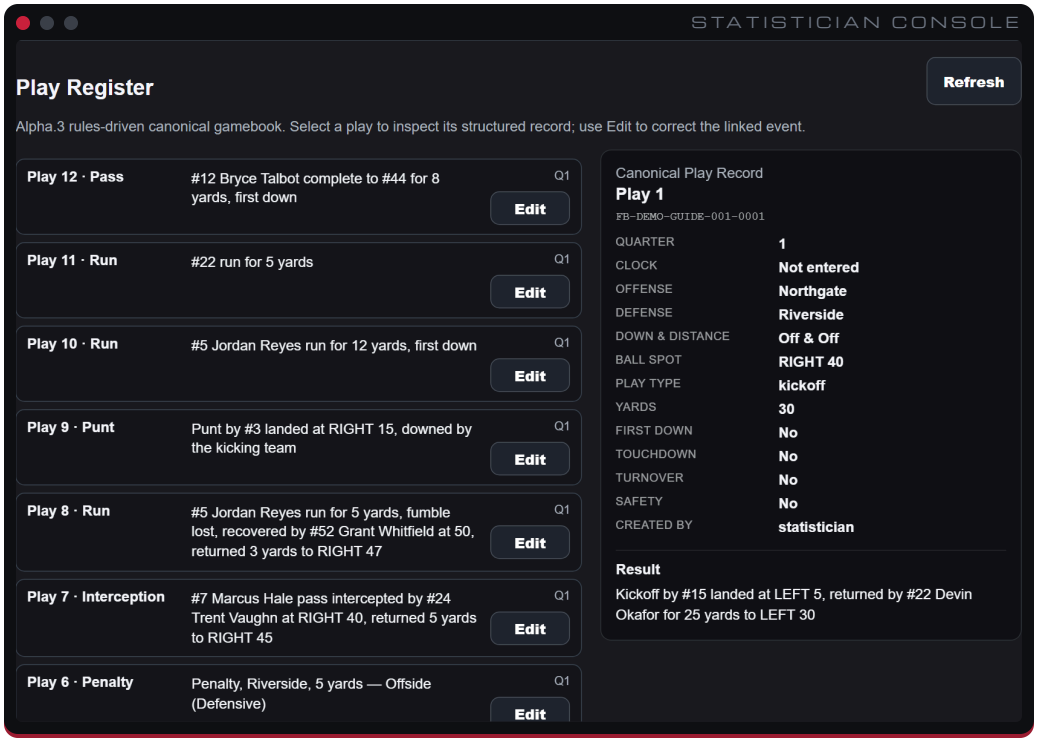

FIG 44 In the register the unresolved plays show a bare number with no name: *#22 run for 5 yards* and *complete to #44 for 8 yards, first down*.

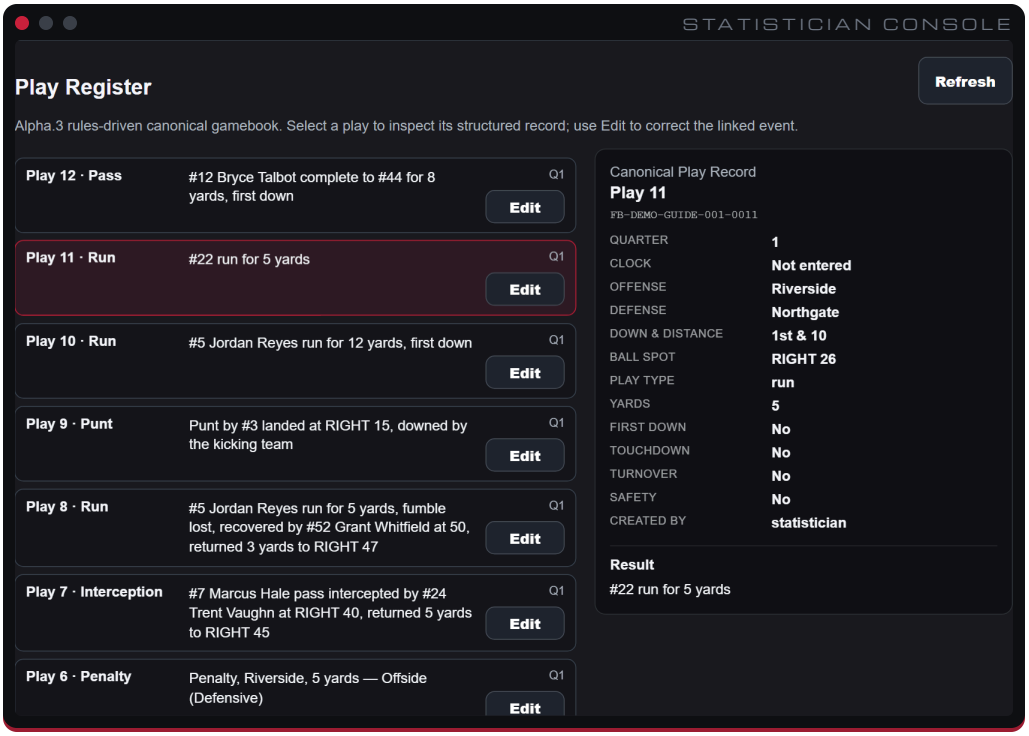

FIG 45 Tap a play to see its canonical record on the right side of the register.

WHAT TO DO WHEN YOU SEE AMBER

1. Double-check the number on the field if you can do it in a second or two. If you misread it, retype it.
2. Otherwise **record the play anyway.** Don't hunt through rosters, don't stop the game, don't undo.
3. Write down the **play number** from the register and what you think the right jersey was (e.g. "Play 11 — Riverside #22, probably #5").
4. Keep entering the next plays normally.
5. At a break (halftime, or after the last whistle) fix it with that play's **Edit** button: retype the jersey and **Save Edit**. Player credit moves with it. Do this **before Confirm Final** (Phase 10 shows it), or hand your notes to the producer.

PHASE 5

5 Scoring Plays: TD, PAT, 2-Point, FG, Safety

You never type a score. Touchdowns and safeties come from the End Spot; tries and field goals have their own guided pop-up. One example of every scoring outcome follows.

Touchdown (run)

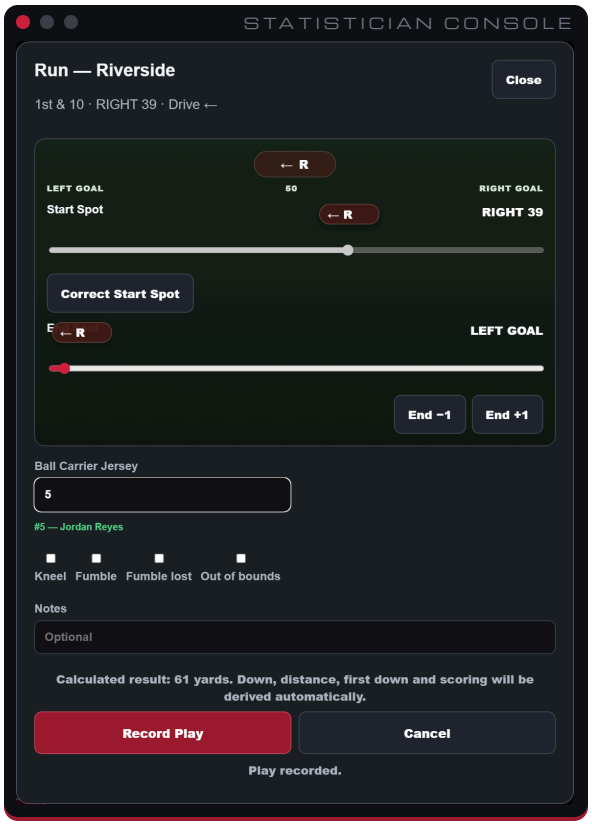

FIG 46 Riverside #5 run from RIGHT 39: End Spot dragged all the way to LEFT GOAL.

Enter it like any run, but drag **End Spot** all the way into the end zone the team is attacking (the slider label reads `LEFT GOAL` or `RIGHT GOAL`). The preview shows the full yardage.

On **Record Play** the system scores **6 points** and opens the **TRY REQUIRED** panel.

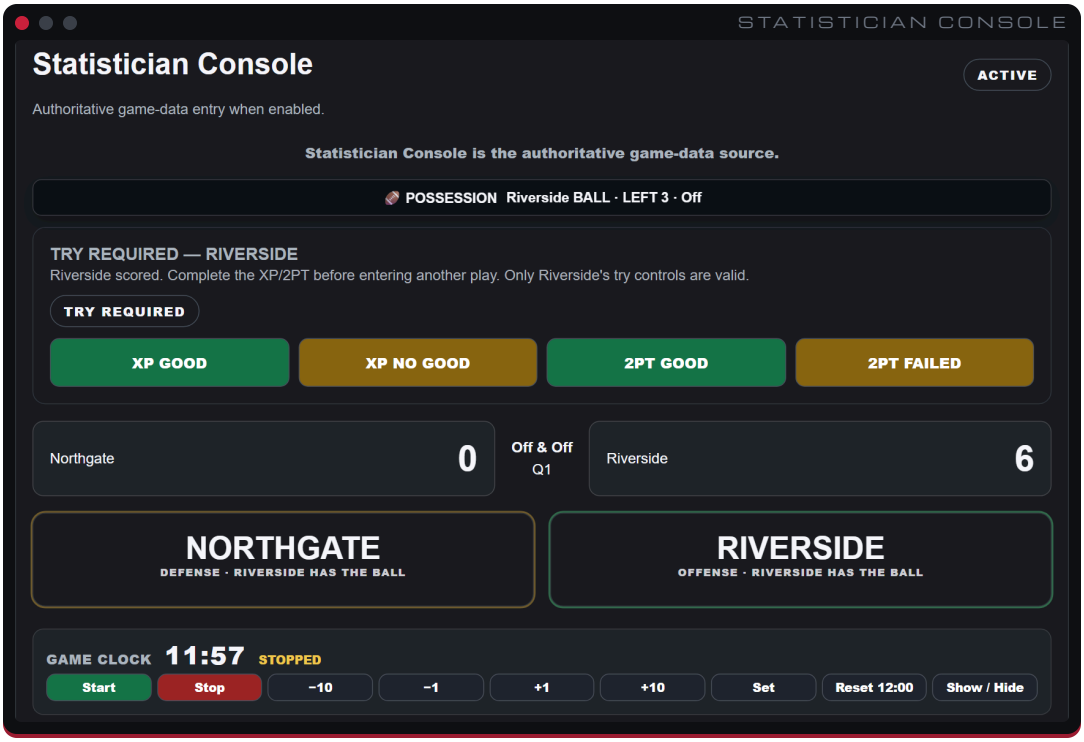

FIG 47 Riverside 6, Northgate 0. TRY REQUIRED — RIVERSIDE with four buttons. Play buttons are hidden until the try is entered.

XP GOOD	Kicked extra point good (+1).
XP NO GOOD	Kick missed or blocked (+0).
2PT GOOD	Two-point conversion by run or pass succeeded (+2).
2PT FAILED	Two-point attempt failed (+0).

PAT by run – 2-point conversion good

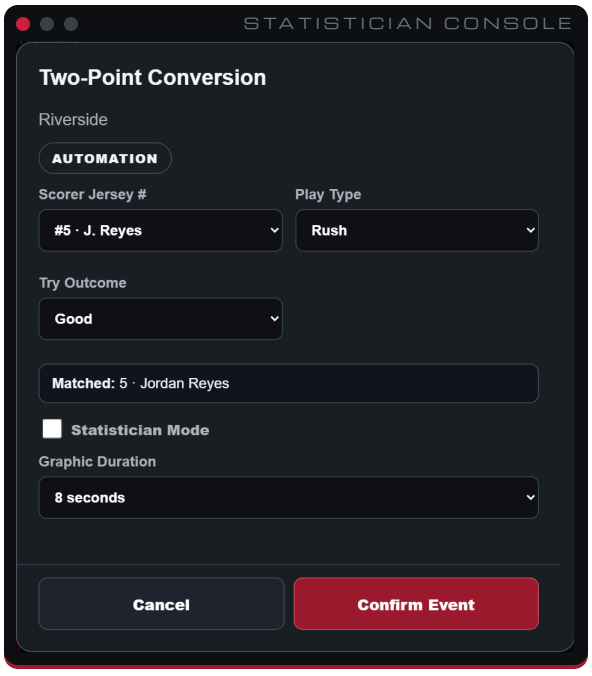

FIG 48 2PT GOOD: scorer #5, Play Type Rush.

Press **2PT GOOD**. The **Try** pop-up opens with **Try Outcome: Good** already set.

Scorer Jersey #	Pick the runner (or receiver) from the list. Roster players show with names.
Play Type	**Rush** for a run, **Reception** for a pass (then a **QB / Passer** box appears).
Try Outcome	Good / Failed / Blocked / Retry. Pre-set by the button you pressed.
Statistician Mode	Optional: tick to add yardage detail. Not needed for tries.
Graphic Duration	How long the score graphic shows on air. Leave at 8 seconds unless told otherwise.

Press **Confirm Event**.

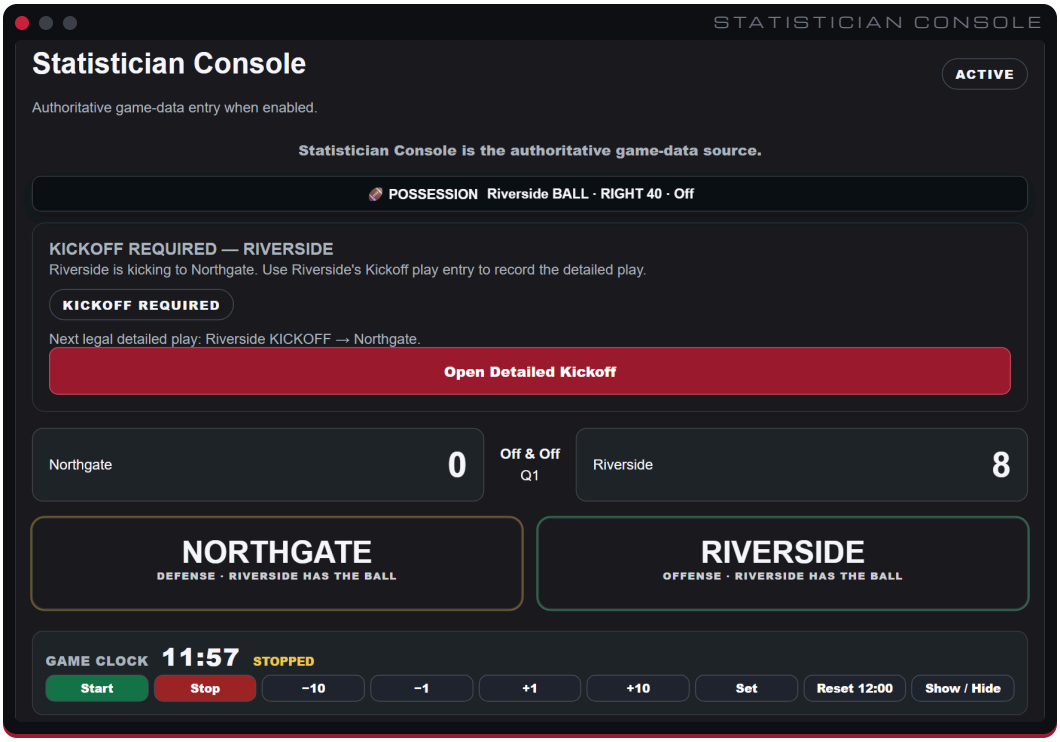

FIG 49 Riverside 8, Northgate 0. The panel now reads KICKOFF REQUIRED — RIVERSIDE.

Kickoff with a touchback

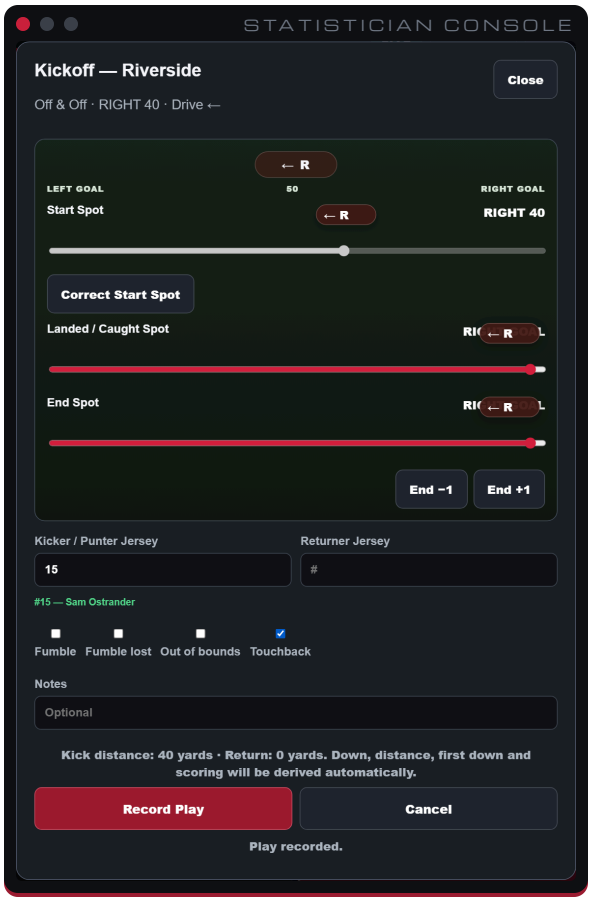

FIG 50 Kickoff into the end zone: Landed dragged to RIGHT GOAL, Touchback ticked.

After every score the kickoff is required next. Press **Open Detailed Kickoff**, enter the kicker, drag **Landed** into the end zone and tick **Touchback**. No returner needed.

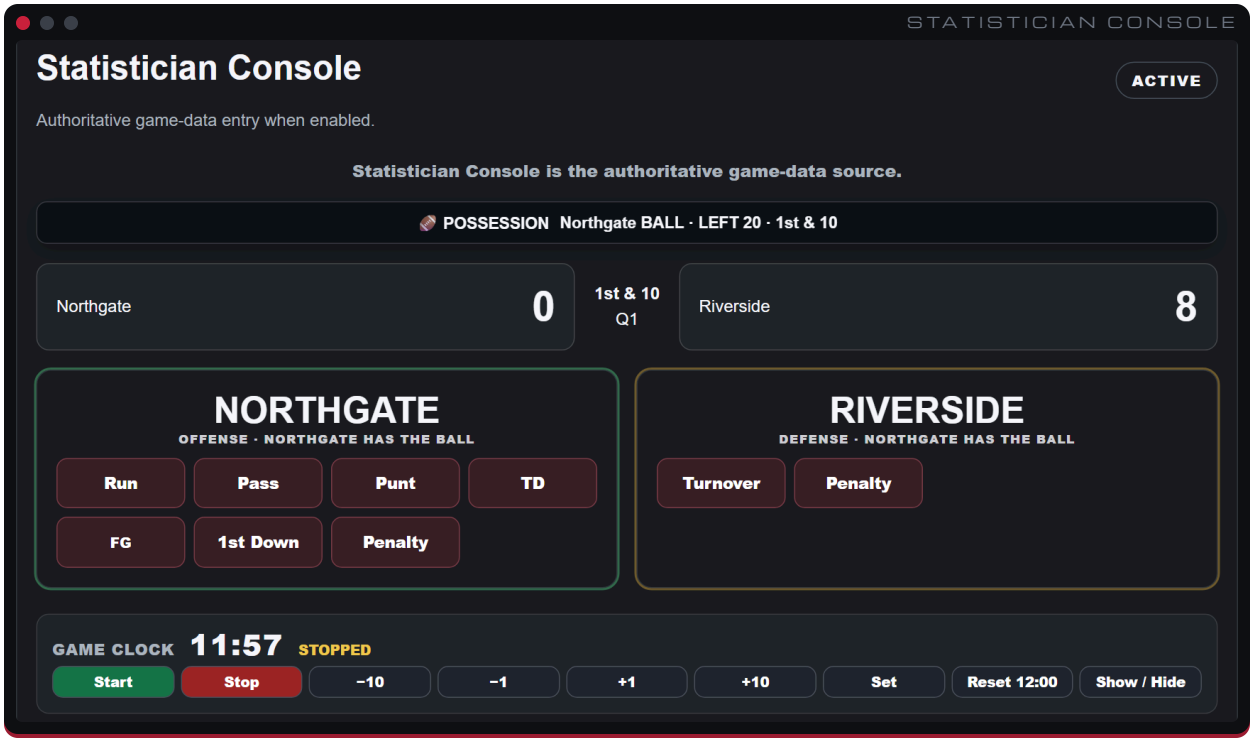

FIG 51 Touchback: Northgate ball, 1st & 10 at its own 20.

Touchdown (pass) and a kicked PAT

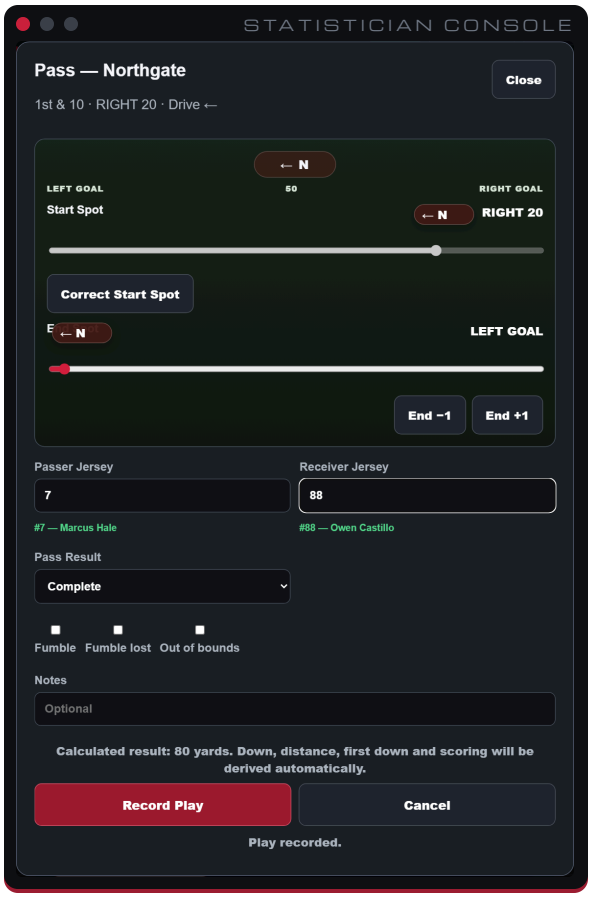

FIG 52 Northgate #7 to #88: End Spot at the goal line Northgate is attacking (80 yards).

A touchdown pass is a complete **Pass** whose End Spot is in the end zone.

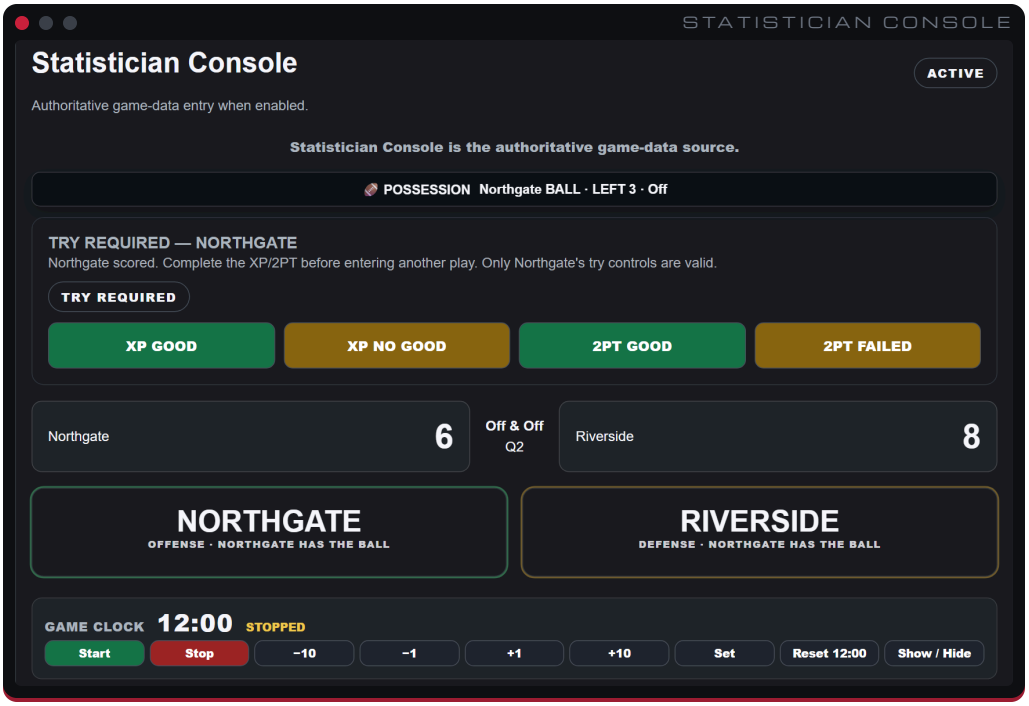

FIG 53 Northgate 6, Riverside 8 — TRY REQUIRED — NORTHGATE.

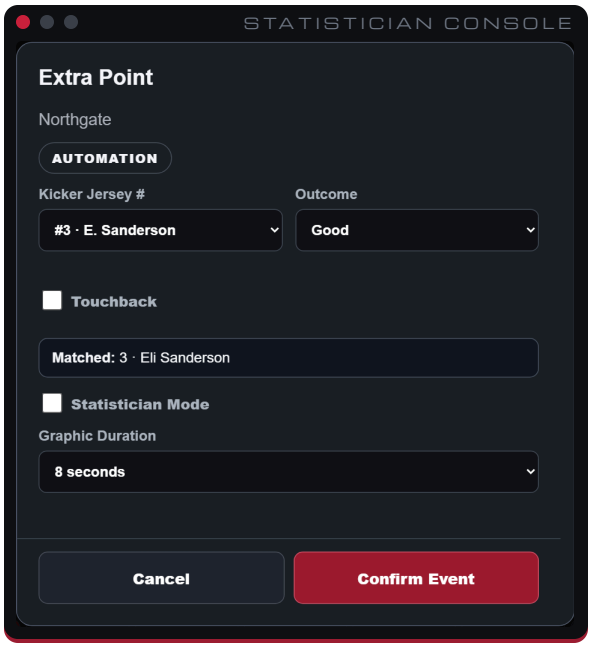

FIG 54 XP GOOD: pick the kicker (#3 Eli Sanderson), Outcome: Good.

Press **XP GOOD**. Choose the kicker from **Kicker Jersey #**; **Outcome** is already *Good*. **Confirm Event**.

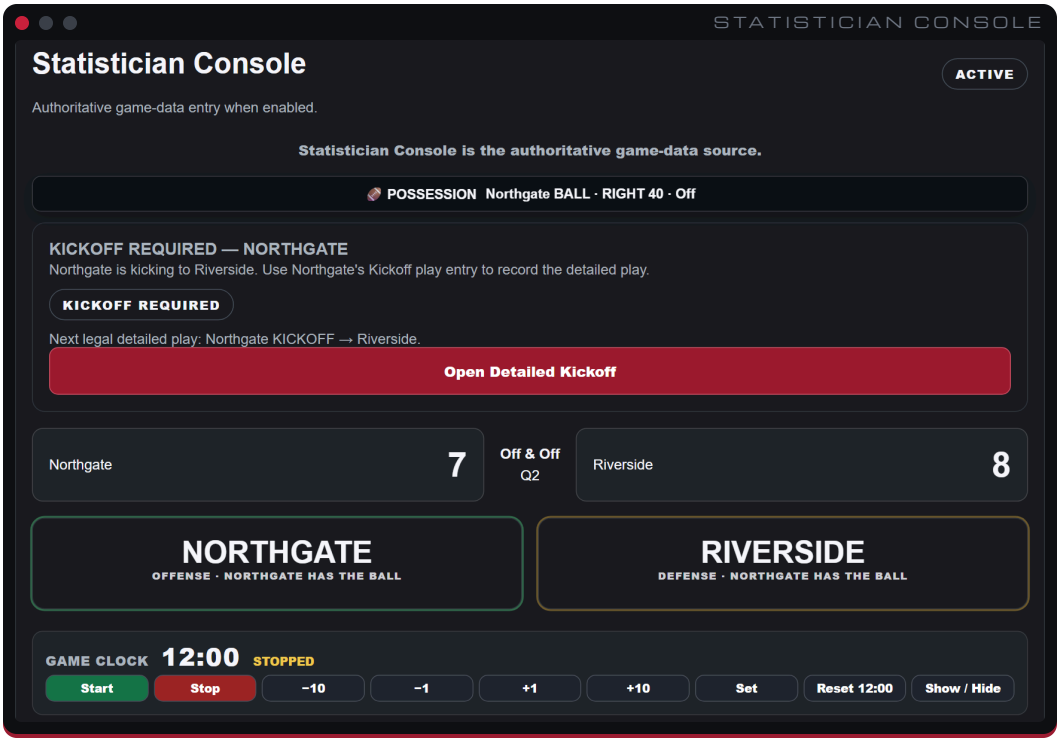

FIG 55 Northgate 7, Riverside 8 — and the kickoff is required again.

PAT kick no good

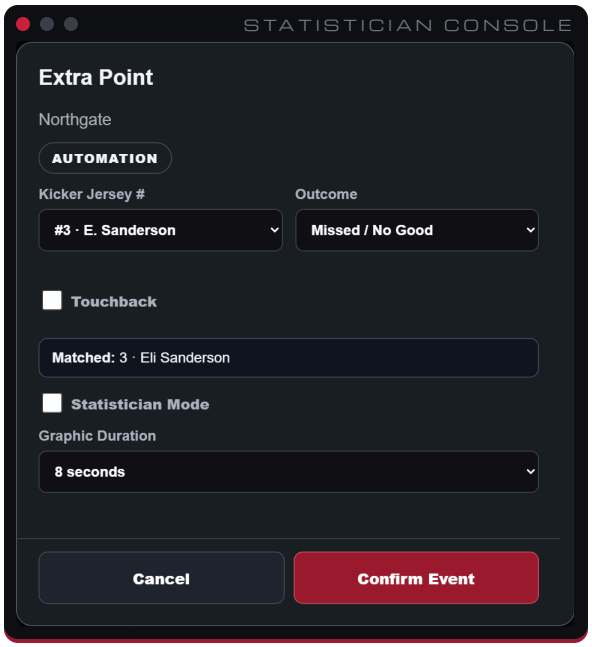

FIG 56 XP NO GOOD in the 4th quarter: Outcome "Missed / No Good".

Same pop-up; **XP NO GOOD** sets **Outcome** to *Missed / No Good*. You can change it to *Blocked* if it was blocked. Still pick the kicker.

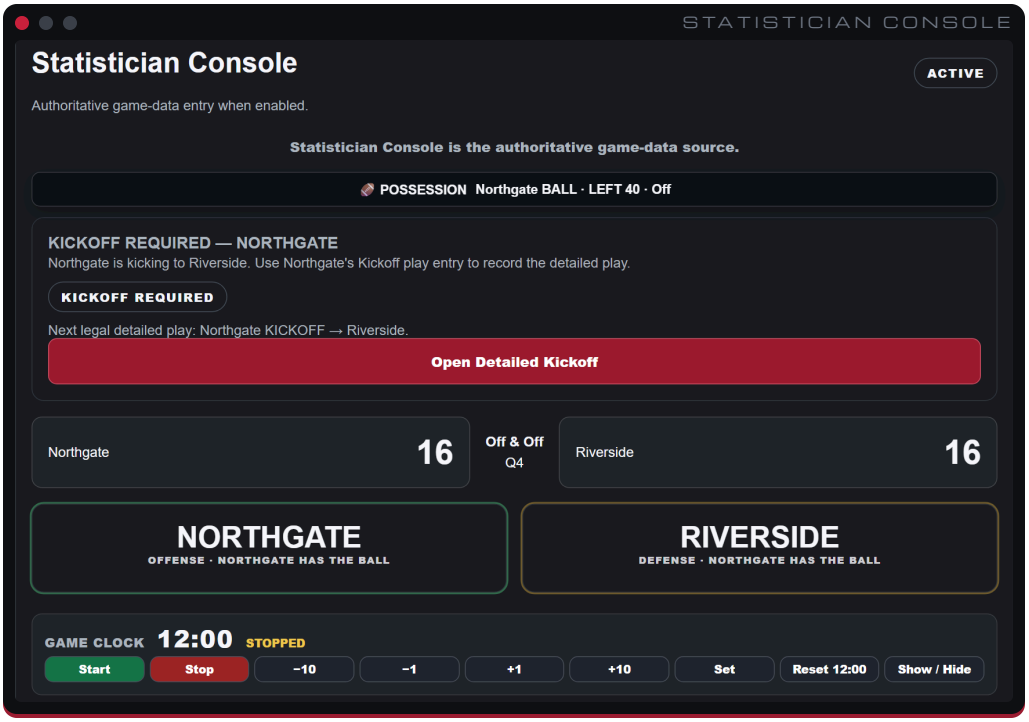

FIG 57 No points added: Northgate 16, Riverside 16.

PAT by pass – 2-point conversion failed

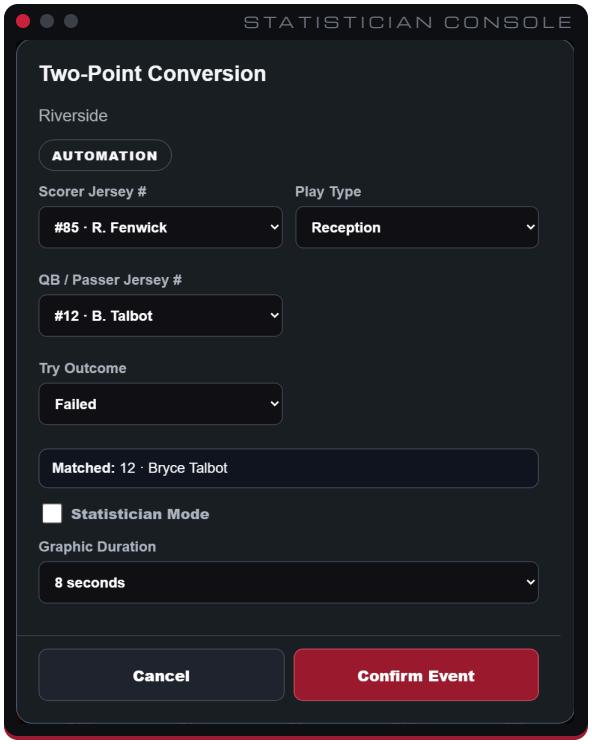

FIG 58 2PT FAILED: Play Type Reception, intended receiver #85, passer #12.

2PT FAILED sets **Try Outcome** to *Failed*. Choose **Reception** as the Play Type, pick the intended receiver as Scorer and the QB as Passer, then **Confirm Event**.

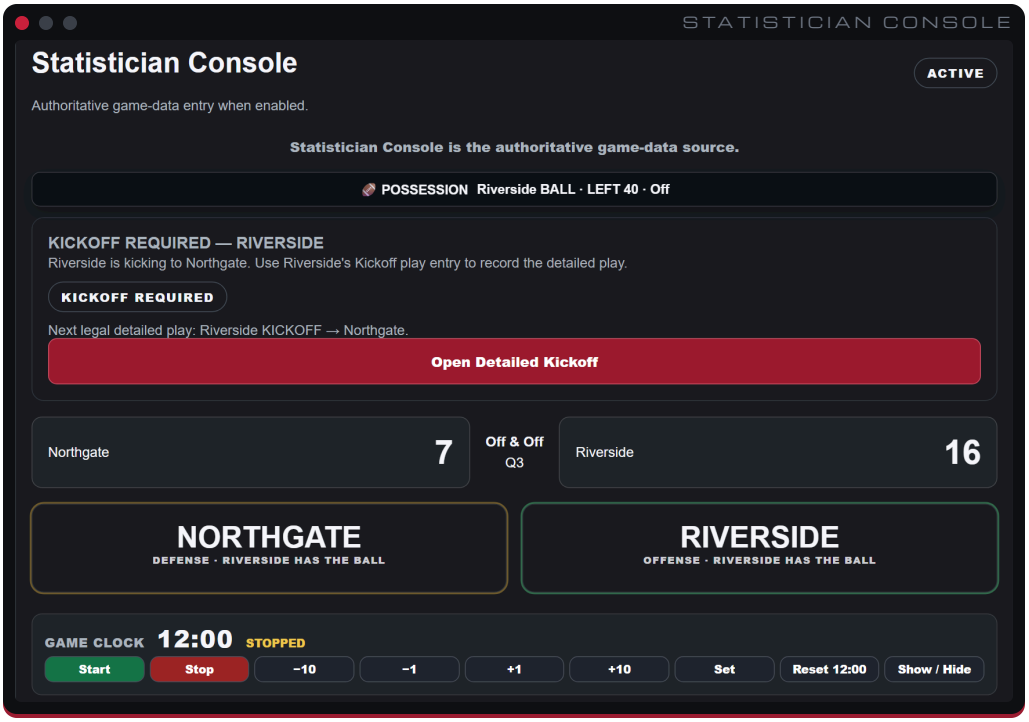

FIG 59 Riverside 16 (no points added for the failed try), kickoff required.

Field goal

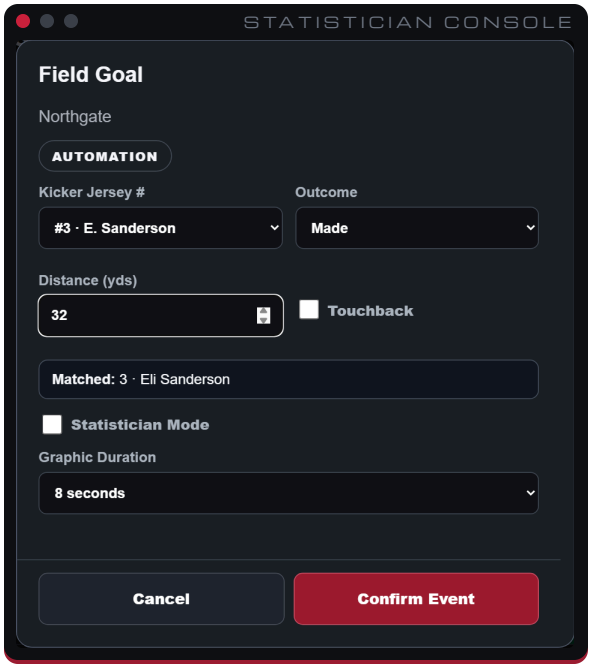

FIG 60 FG on the Northgate card: kicker #3, Outcome Made, Distance 32.

Press **FG** on the kicking team's card.

Kicker Jersey #	The kicker.
Outcome	**Made**, **Missed / No Good**, or **Blocked**.
Distance (yds)	Optional, but fill it in: line of scrimmage + 17 (e.g. ball at the 15 = 32 yards).
Miss/Block Result Spot	Appears for a miss: where the defense takes over (optional).

Confirm Event. A made field goal adds **3 points** and sets up the kickoff.

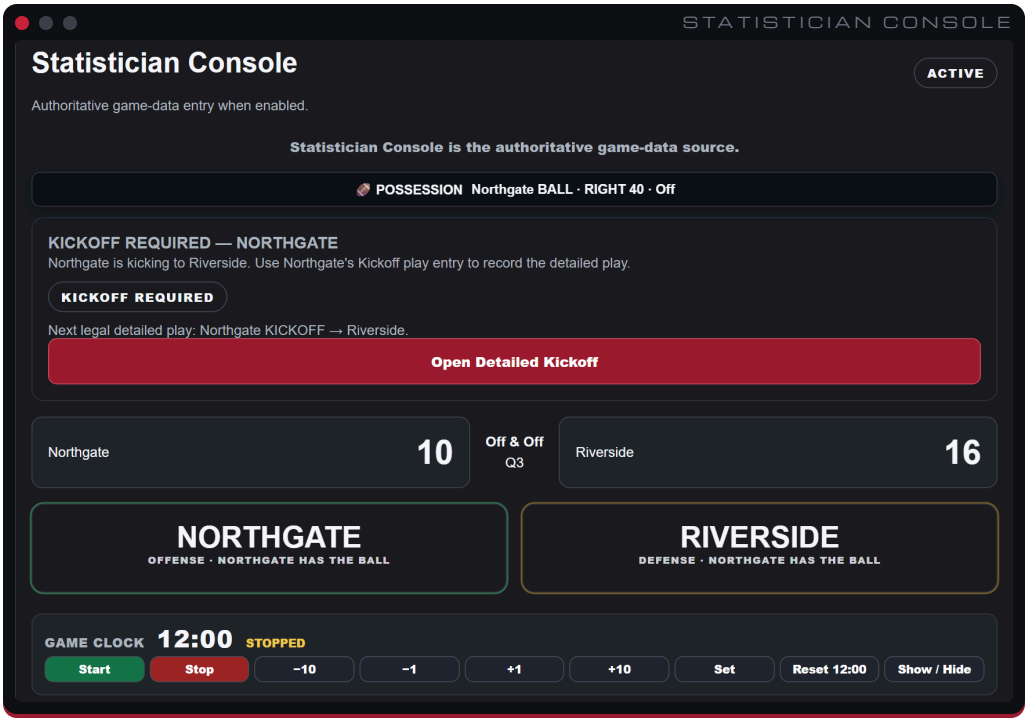

FIG 61 Northgate 10, Riverside 16 after the field goal.

Safety

There is no Safety button — and you don't need one. Enter the play normally and drag the End Spot into the **offense's own** end zone. In this example Northgate fair-caught a punt at its own 2, then was tackled in its own end zone on the next run.

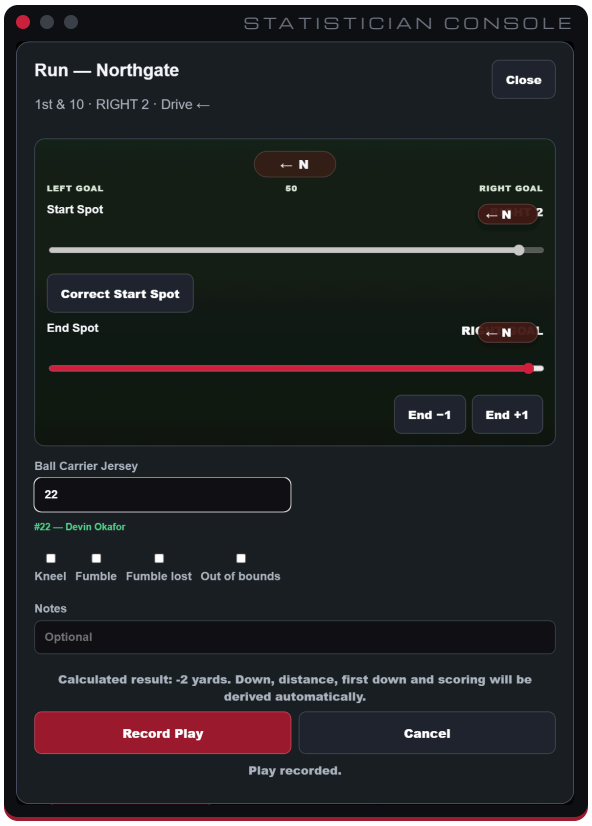

FIG 62 Northgate run from RIGHT 2: End Spot dragged to RIGHT GOAL (Northgate's own goal line).

On **Record Play** the system awards **2 points to the defense** and opens a **free kick** by the team that gave up the safety.

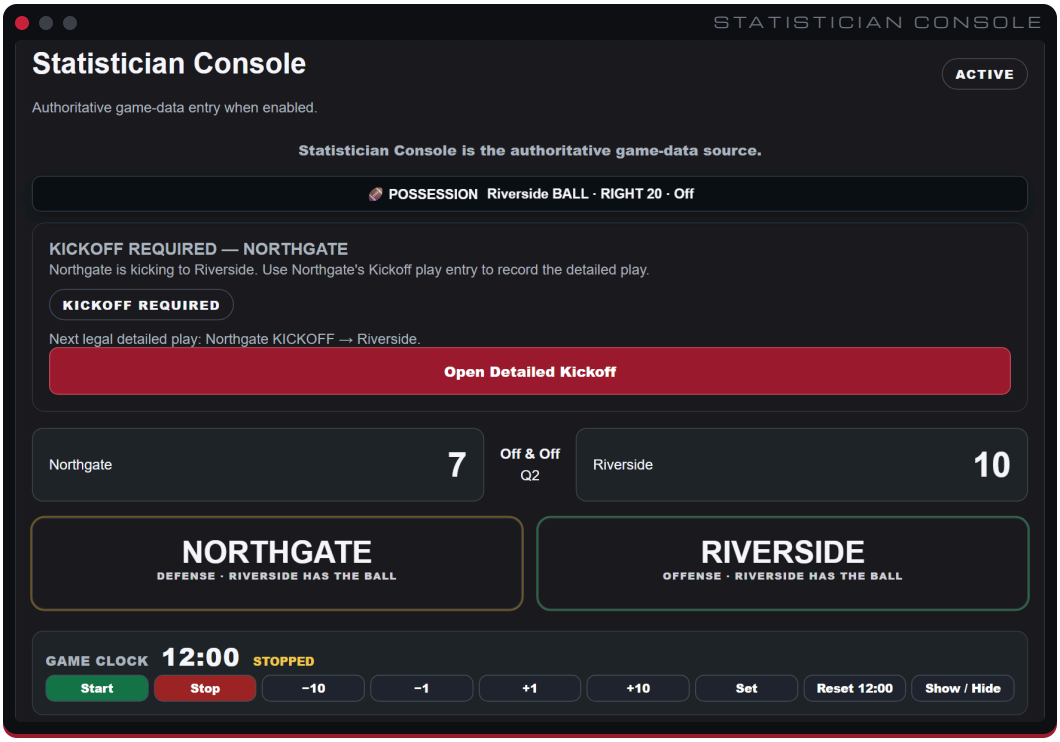

FIG 63 Safety: Riverside 10, Northgate 7. The panel asks for Northgate's free kick.

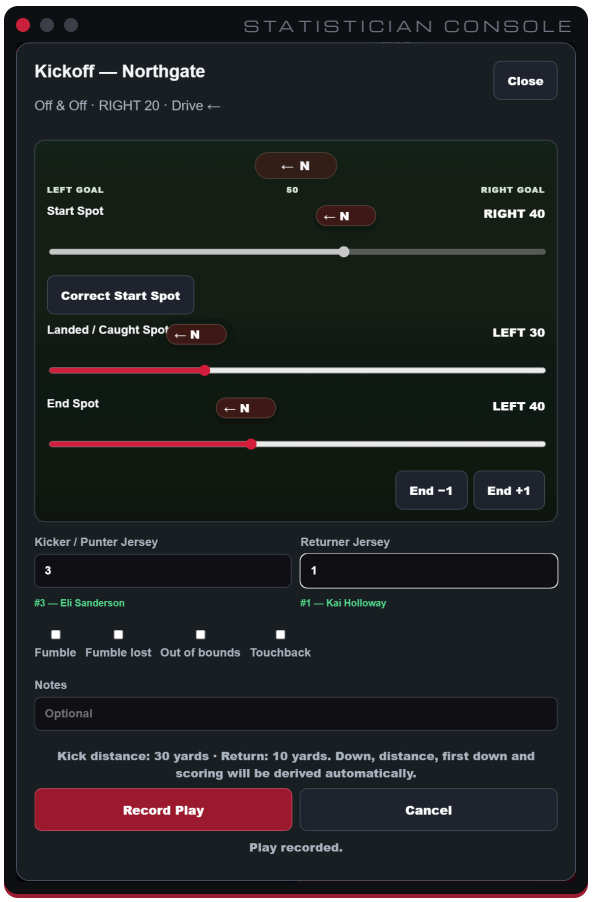

FIG 64 The free kick uses the same kickoff form: Open Detailed Kickoff.

Enter it exactly like a kickoff: kicker, landed spot, returner, end spot.

SCORE LOOKS WRONG?

Check the last play's End Spot first. A touchdown that didn't score usually means the End Spot stopped one yard short of the goal; a surprise safety means the slider went to the wrong goal line. **Undo Last Event** and re-enter.

PHASE 6

6 Ending a Quarter

Quarter changes are one button in Period Administration. Teams switch ends and the screen flips the field for you.

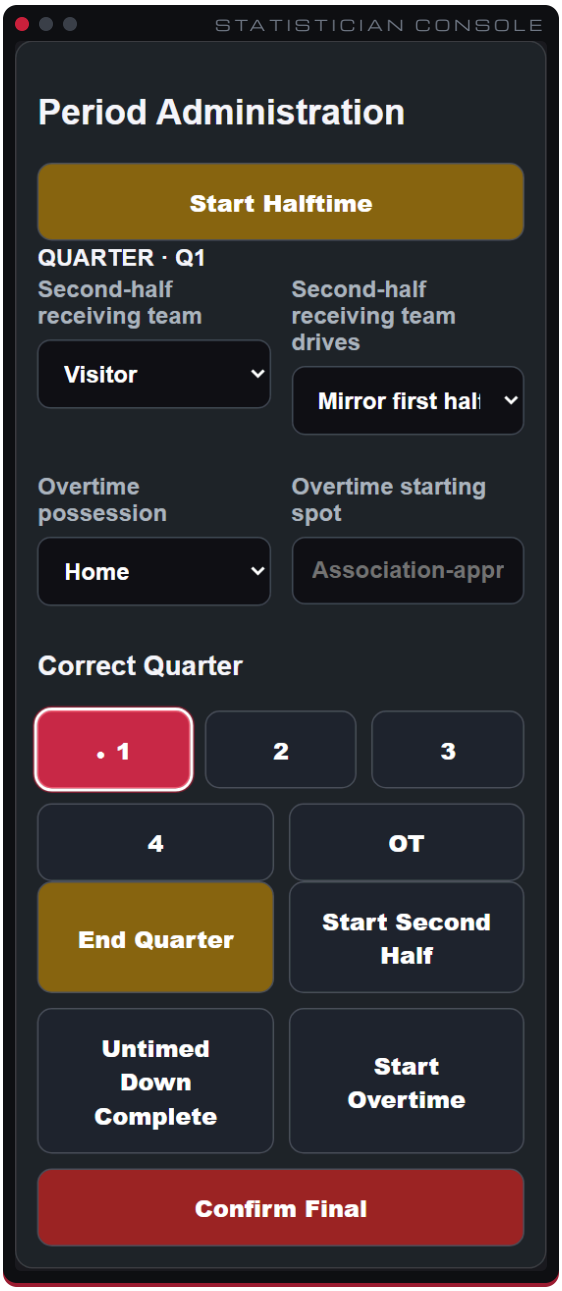

FIG 65 Period Administration at the end of the 1st quarter.

End Quarter	Ends the current quarter. Use it when the officials signal the end of the quarter.
Status line	*QUARTER · Q1* — where the game is. Watch it change.
Correct Quarter 1–4, OT	Manual override only, if the quarter shown is wrong.
Start Halftime	Manual halftime switch. You won't normally need it: End Quarter at the end of Q2 starts halftime.
Start Second Half	Starts the 3rd quarter (Phase 8).
Untimed Down Complete	After a penalty extends a period with an untimed down: press once that down is played.
Start Overtime	Phase 9.
Confirm Final	Phase 10.

1. When the quarter ends, make sure the last play of the quarter is entered.
2. Press **End Quarter**.
3. Check the scoreboard shows the new quarter (**Q2**) and the possession strip still has the right team and yard line.

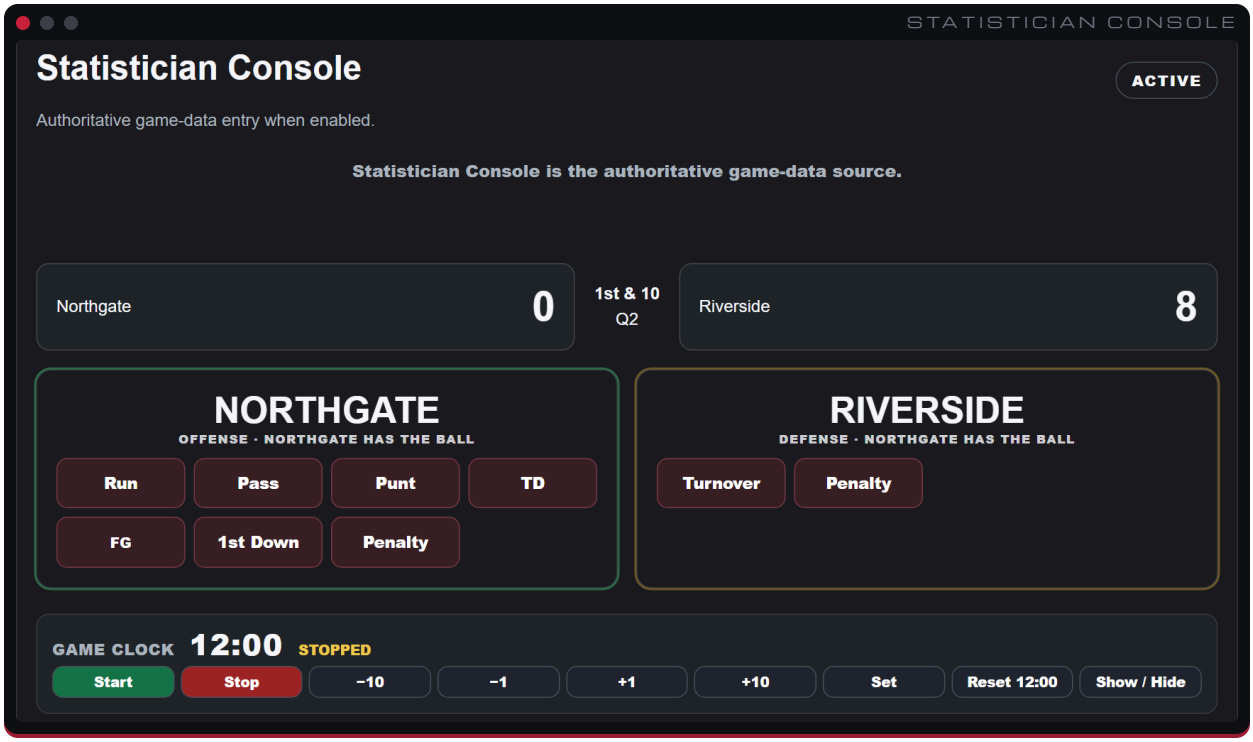

FIG 66 Q2 begins. Same down, distance and possession — but the ball spot flipped from LEFT 20 to RIGHT 20 because the teams changed ends. That's correct: it's still Northgate's own 20.

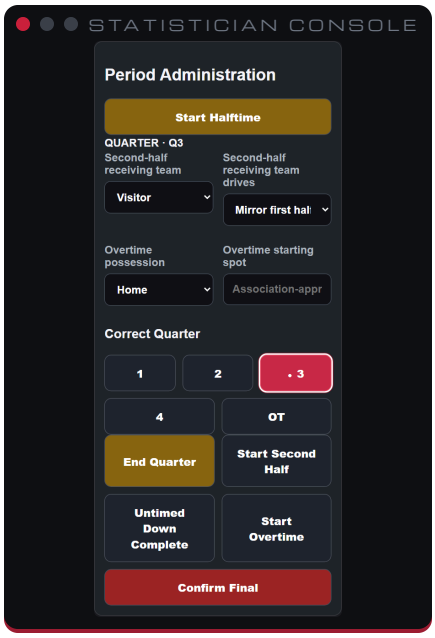

FIG 67 End of Q3: status QUARTER · Q3.

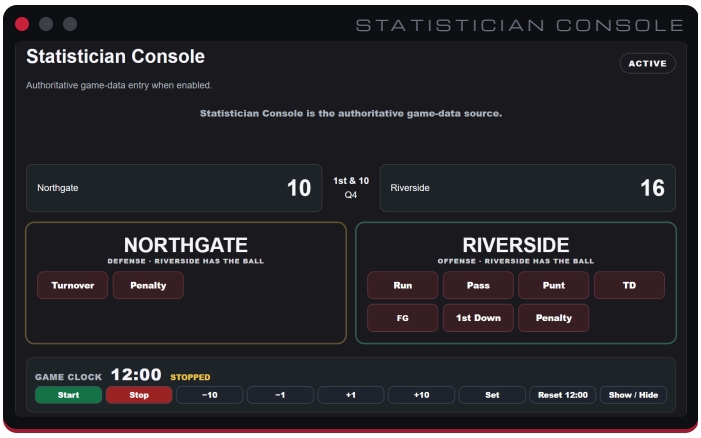

FIG 68 After End Quarter: Q4, ends switched again (LEFT 20 → RIGHT 20).

PHASE 7

7 Halftime

Ending the 2nd quarter puts the game into halftime automatically. Nothing to enter during the break.

1. Enter the last play of the half (here Riverside kneels to run out the clock: **Run** with **Kneel** ticked).
2. Press **End Quarter** in Period Administration.
3. Check the Period Administration status reads **HALFTIME · Q2** and the top button now says **End Halftime**.

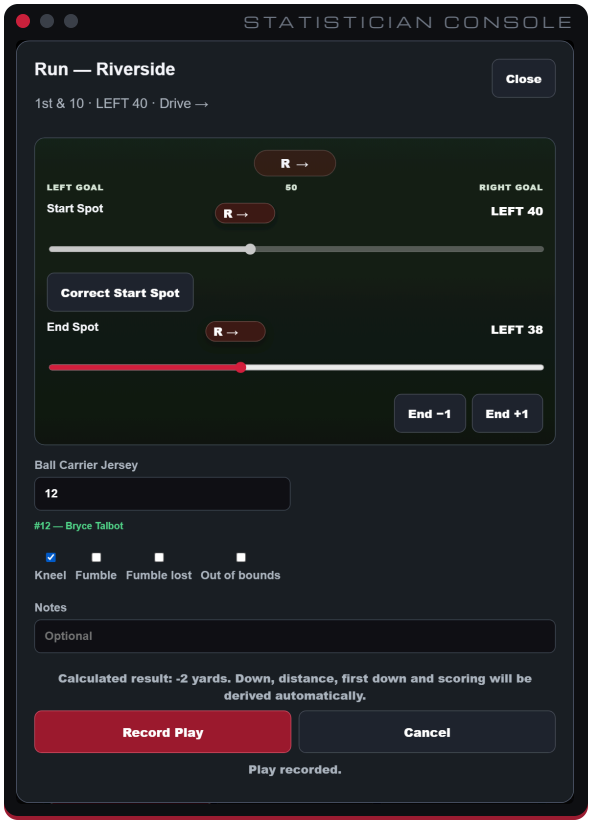

FIG 69 Last play of the half: Riverside #12 kneels (Kneel ticked).

The **Kneel** box records a victory-formation kneel so it's shown as a kneel in the stats.

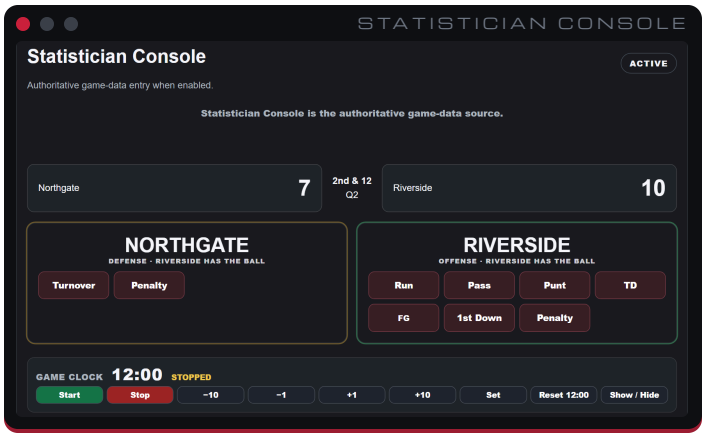

FIG 70 After End Quarter at the end of Q2.

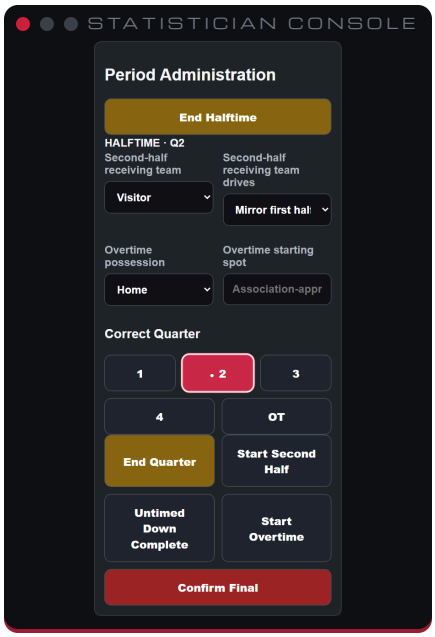

FIG 71 HALFTIME · Q2. Second-half receiver (Visitor) came from the coin toss.

Second-half receiving team	Filled in automatically from the coin toss (Riverside deferred, so Riverside receives). Change only if the officials tell you otherwise.
Second-half receiving team drives	*Mirror first half (default)* is right in most games. If the receiving team chooses a different end, set it here before starting the second half. Missed it? See “Direction looks wrong after halftime?” in Phase 8.

DURING THE BREAK

Use halftime to tell your producer about any amber/unresolved plays you noted in the first half.

PHASE 8

8 The Second-Half Kickoff

One button starts the 3rd quarter and sets up the kickoff; then it's the same kickoff form as Phase 2.

1. When the teams line up for the second-half kickoff, press **Start Second Half** (**End Halftime** at the top of the card does the same thing).
2. The quarter becomes **Q3** and a **KICKOFF REQUIRED — NORTHGATE** panel appears (Northgate kicks, because Riverside receives).
3. Press **Open Detailed Kickoff** and enter the kick, the returner and the spots.

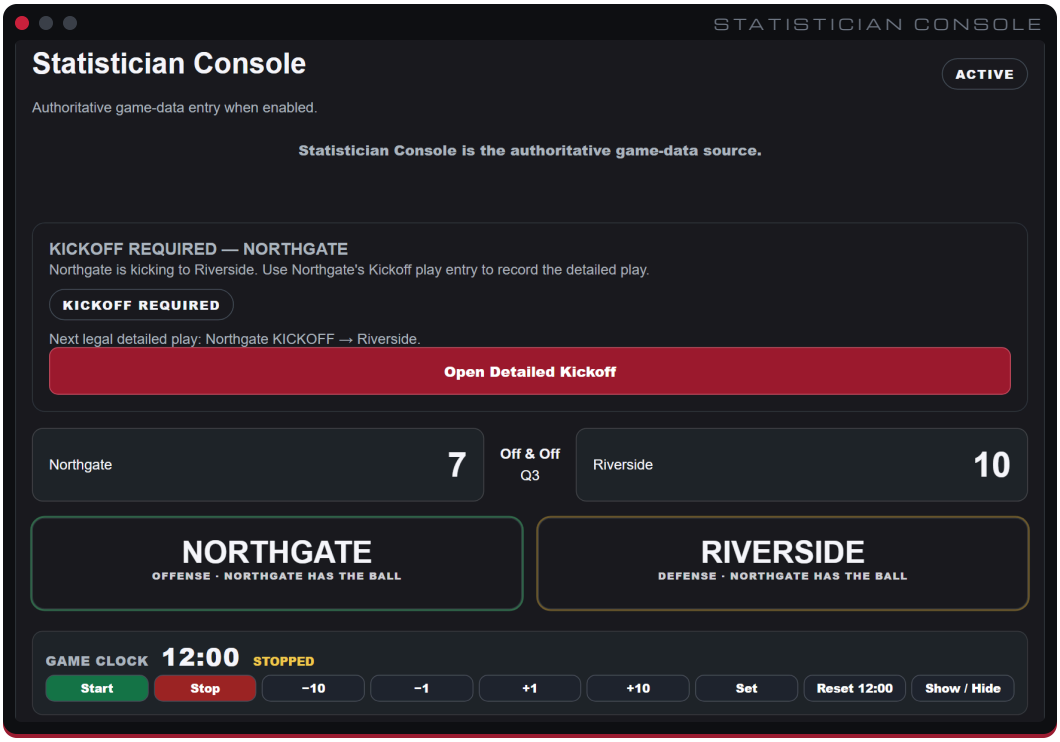

FIG 72 Q3, KICKOFF REQUIRED — NORTHGATE.

Direction looks wrong after halftime?

By default the screen assumes the teams simply swap ends from the first half. Sometimes they don't. For example, the receiving team chooses the other goal, or the halftime dropdown was left on *Mirror first half*. **Check the arrow before you enter the second-half kickoff.** In this example Northgate is actually kicking toward the LEFT goal, but the screen still has it driving →.

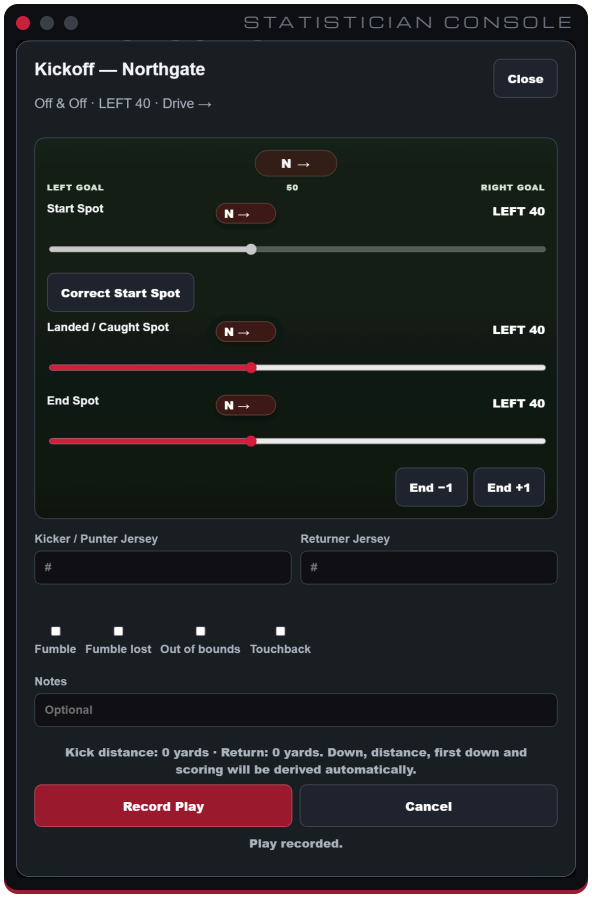

FIG 73 The tell: the kickoff form's badge reads N → and the kick starts at LEFT 40, but on the field Northgate is kicking toward the LEFT goal.

FIXING IT AT THE KICKOFF (THE COMMON CASE)

1. Press **Cancel** to close the kickoff form without recording.
2. Scroll to **Field Position** and press the correct **← Drive** or **Drive →** button. The big arrows in the **Drive Direction** card do the same thing. Either one sets the team shown in the POSSESSION strip, and the other team automatically switches to the opposite direction.
3. Press **Open Detailed Kickoff** again. The badge now reads **← N** and the kick starts from Northgate's own 40 (RIGHT 40). Enter the kickoff as normal.

That's all a kickoff needs, because the kickoff form re-places the kicker at their own 40 based on direction.

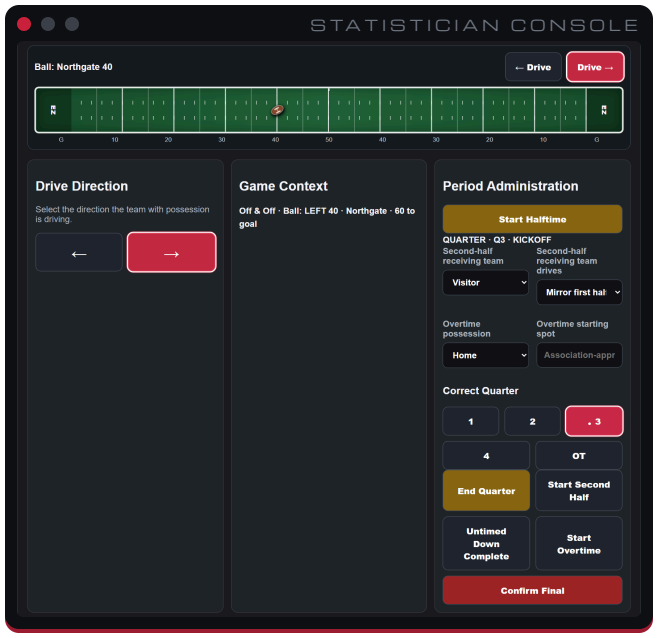

FIG 74 Before: Drive → is lit; Game Context says *LEFT 40 · Northgate · 60 to goal.*

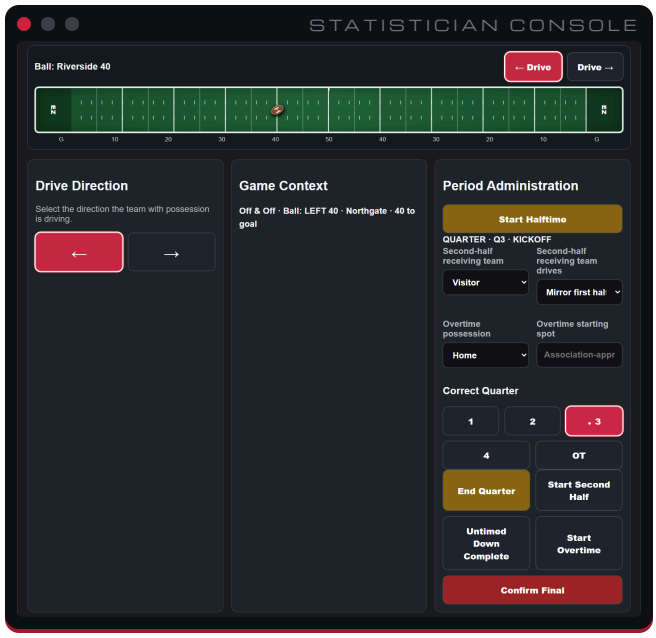

FIG 75 After pressing ← Drive: the ball has **not** moved, so the same LEFT 40 now reads *40 to goal*, and the Ball label changes to *Riverside 40.*

IF YOU NOTICE IN THE MIDDLE OF A DRIVE

Changing the direction does **not** move the ball. The spot stays on the same side of the field (here LEFT 40), so its meaning flips: what was the team's own 40 becomes the opponent's 40. Mid-drive, after pressing the correct Drive button you must also drag the **Field Position** ball to where the ball really is. Then check that **Game Context** shows the right "yards to goal." Otherwise the next plays will count yards, first downs and touchdowns toward the wrong goal. Plays already entered while the direction was wrong may have wrong yardage. Don't undo the drive; note the play numbers for your producer.

READING THE "BALL:" LABEL

The **Ball:** label above the green field names the team whose end of the field the ball is in, based on the current directions. Before the fix it read *Northgate 40*; after it, *Riverside 40*. If that label names the wrong team's end, the direction is wrong.

PREVENT IT AT HALFTIME

If you know the receiving team picked a different end, set **Second-half receiving team drives** in Period Administration *before* pressing Start Second Half.

Entering the second-half kickoff

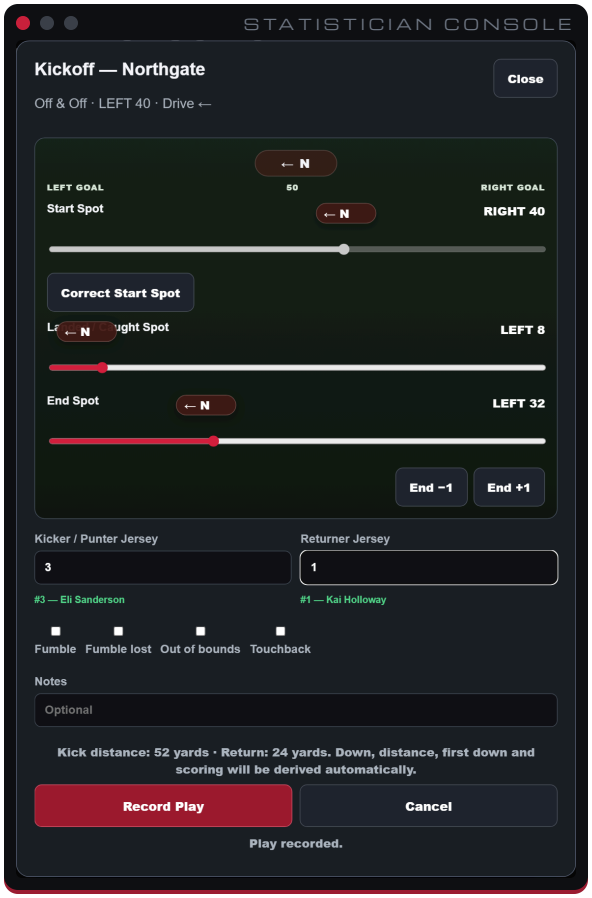

FIG 76 Second-half kickoff after the fix: ← N, from RIGHT 40. Northgate #3 to Riverside #1.

Same form as the opening kickoff: kicker, Landed / Caught Spot, returner, End Spot, **Record Play**.

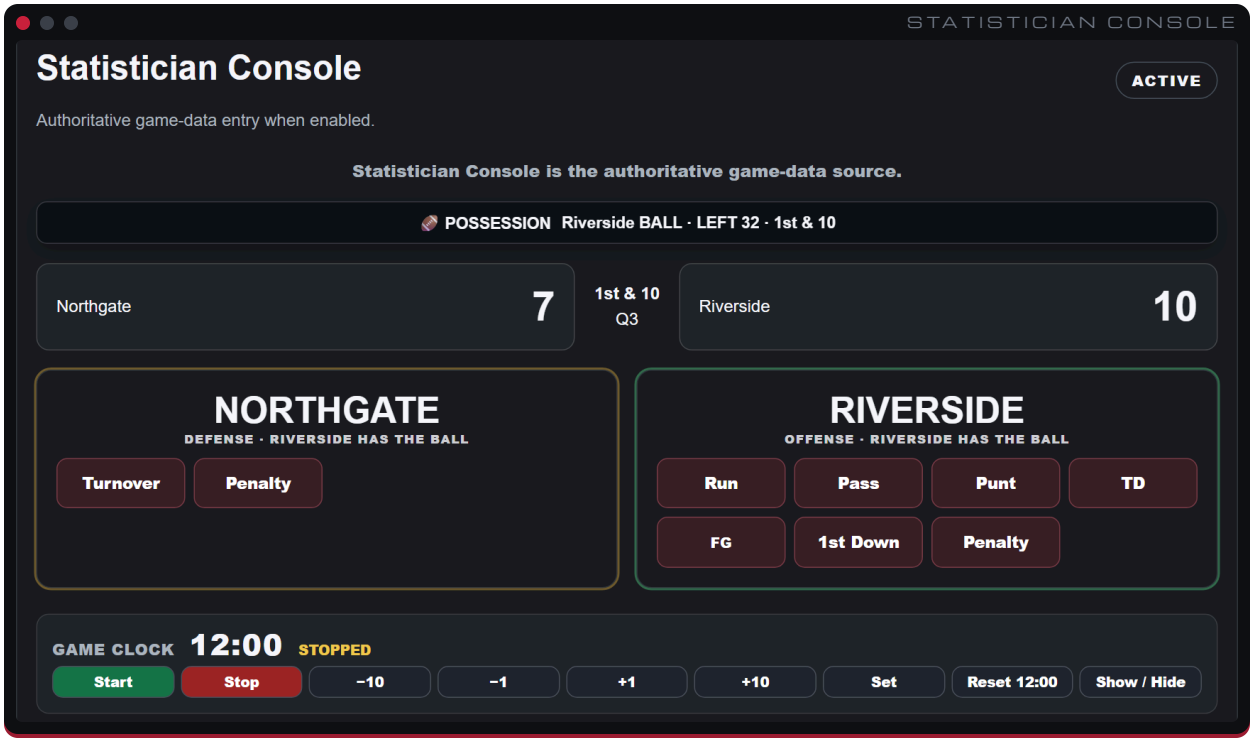

FIG 77 Riverside ball, 1st & 10 at LEFT 32, now driving →. You're back to normal play entry.

"SECOND HALF CAN START ONLY FROM HALFTIME"

If you see this pop-up, the game was never put into halftime (or the second half already started). Check the Period Administration status line before pressing anything else, and ask your producer if it doesn't say HALFTIME.

PHASE 9

9 4th Quarter & Overtime

The 4th quarter plays exactly like the others. If it ends tied, the screen asks for a Final/Overtime decision and walks you into overtime.

End of regulation

1. Enter the final play of the 4th quarter (here Riverside kneels with the game tied 16–16).
2. Press **End Quarter**.
3. Period Administration shows **Q4 COMPLETE · Q4 · Final/OT decision required**.
4. If one team is ahead, go to Phase 10 and **Confirm Final**. If tied, continue below.

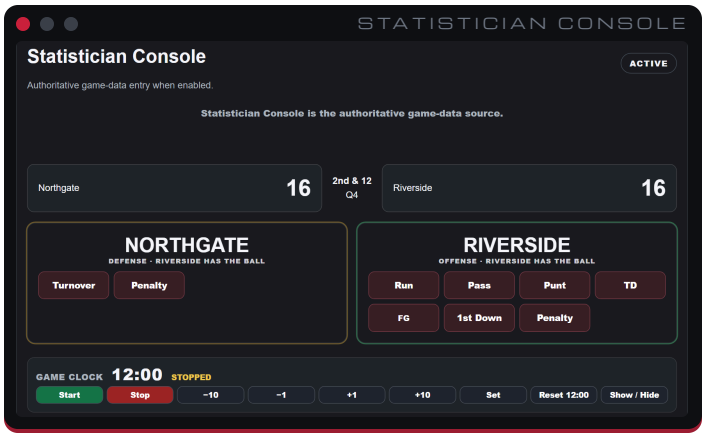

FIG 78 Tied 16–16, Q4 complete.

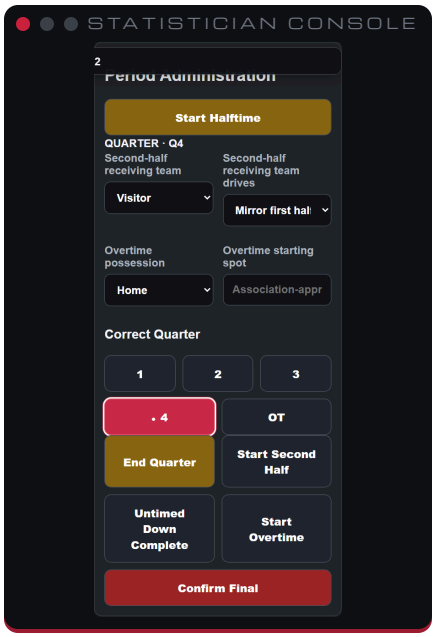

FIG 79 Period Administration just before End Quarter in Q4.

Starting overtime

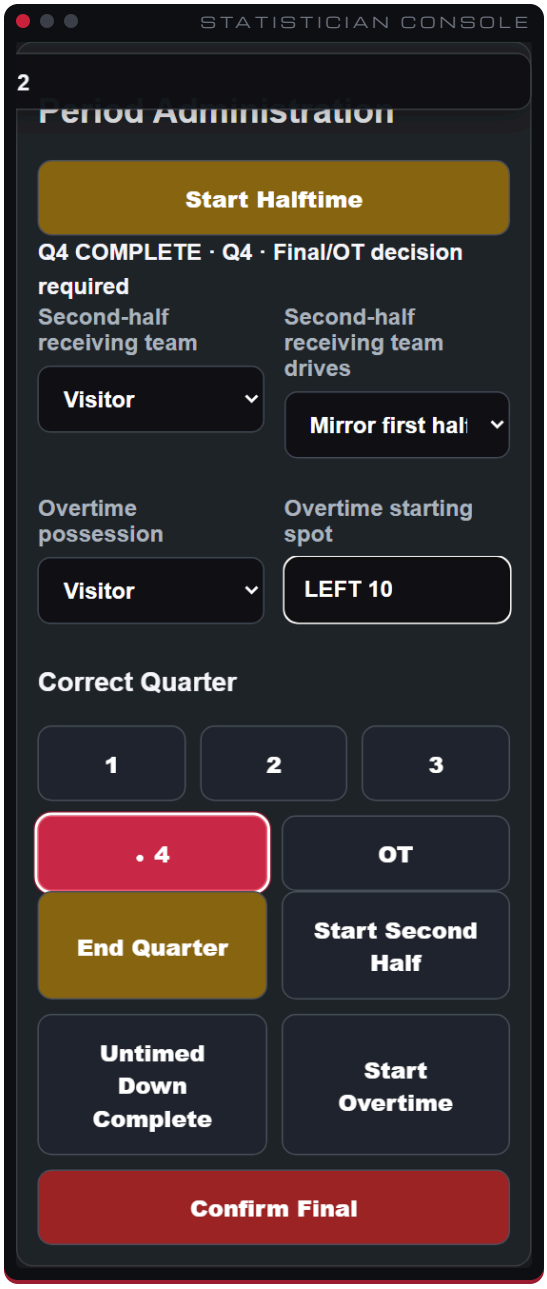

FIG 80 Overtime setup: Riverside (Visitor) first, starting spot LEFT 10.

Overtime possession	The team that goes on offense first (decided by the overtime coin toss).
Overtime starting spot	Where the ball is placed, in field-spot language: `LEFT 10` or `RIGHT 10` = the 10-yard line on that side. Use the spot the officials use (your state association's overtime rule).

1. Set **Overtime possession**.
2. Type the **Overtime starting spot**.
3. Press **Start Overtime**. Both fields are required.

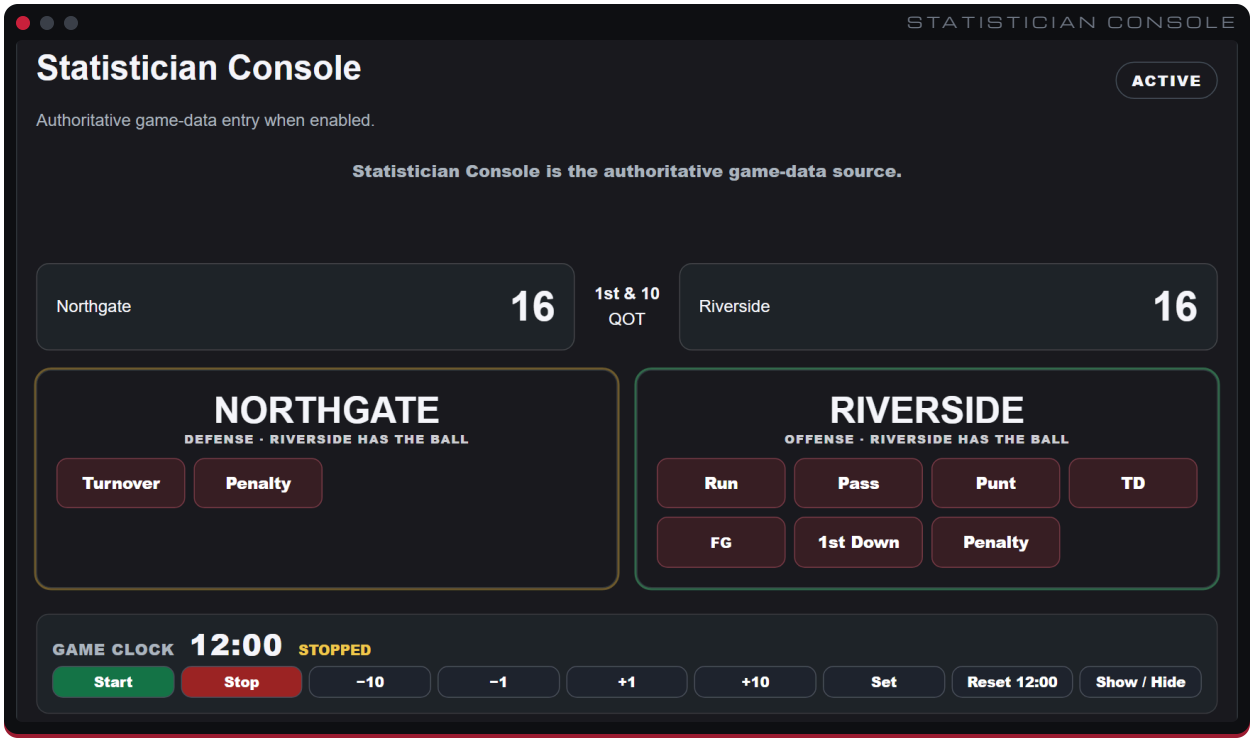

FIG 81 QOT: Riverside, 1st & 10 at LEFT 10. Overtime is untimed, so the clock is hidden from the broadcast.

First overtime possession

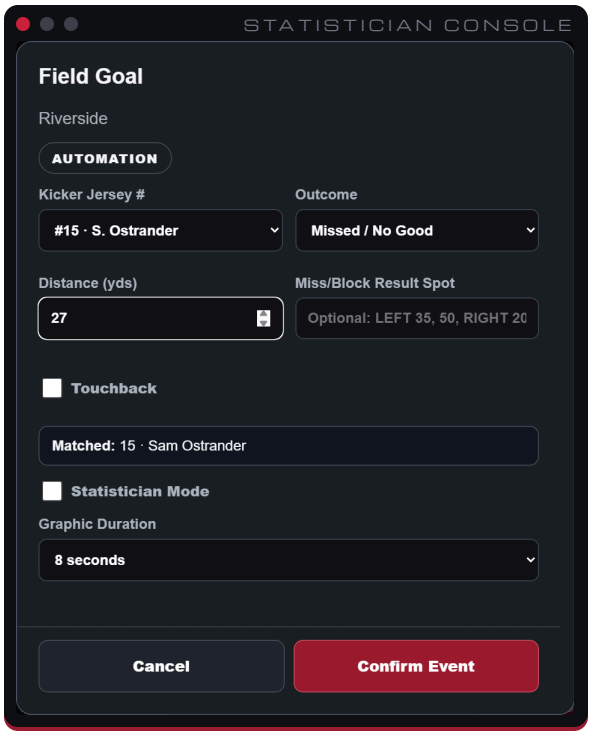

FIG 82 Riverside FG attempt from the 10: Outcome "Missed / No Good", 27 yards.

Enter overtime plays exactly as in regulation. Here Riverside's possession ends with a missed field goal.

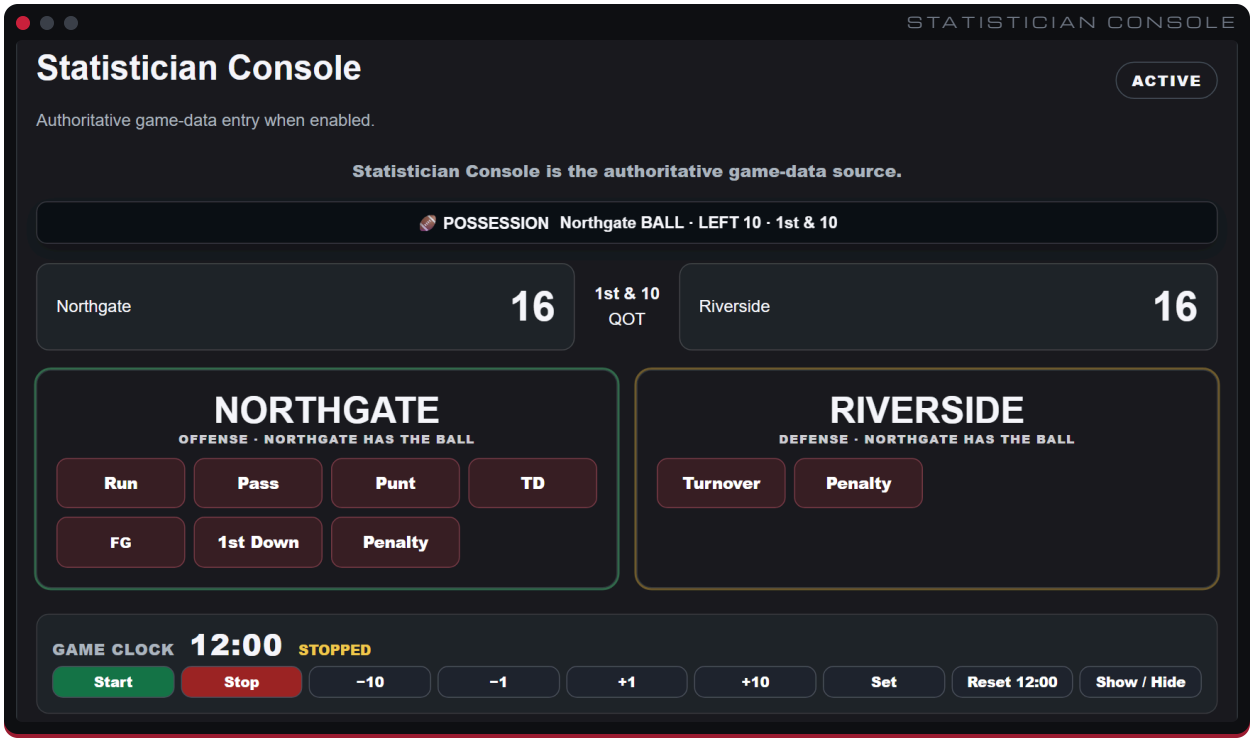

FIG 83 After the miss, possession switched to Northgate — but the ball is still at LEFT 10, Riverside's attacking spot. Northgate's possession must start at the other 10.

Second overtime possession: place the ball yourself

The system hands the ball to the other team but does **not** move it to their overtime starting spot. This is the one time you'll use the manual controls:

1. **Possession:** confirm the correct team is highlighted (press it if not).
2. **Field Position:** drag the ball on the green field to this team's overtime spot. Here Northgate is driving →, so its spot is the 10-yard line nearest the RIGHT goal.
3. **Down & Distance:** press **1st** if needed.

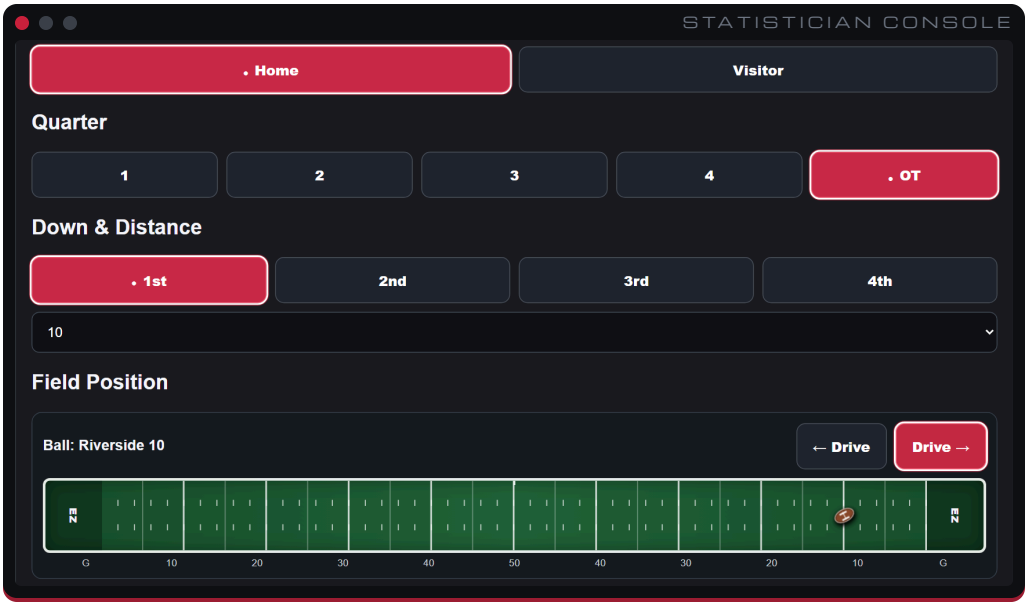

FIG 84 Northgate's overtime possession set up: Possession Home, 1st & 10, ball at the right-hand 10 (driving →). The label reads *Riverside 10*: Riverside's end of the field.

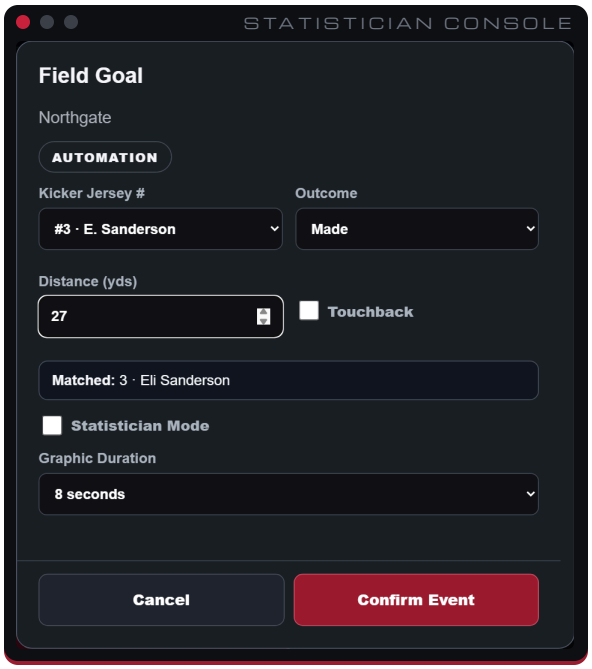

FIG 85 Northgate FG from the 10: Made, 27 yards.

Northgate kicks the winning field goal: **FG** on the Northgate card, Outcome **Made**.

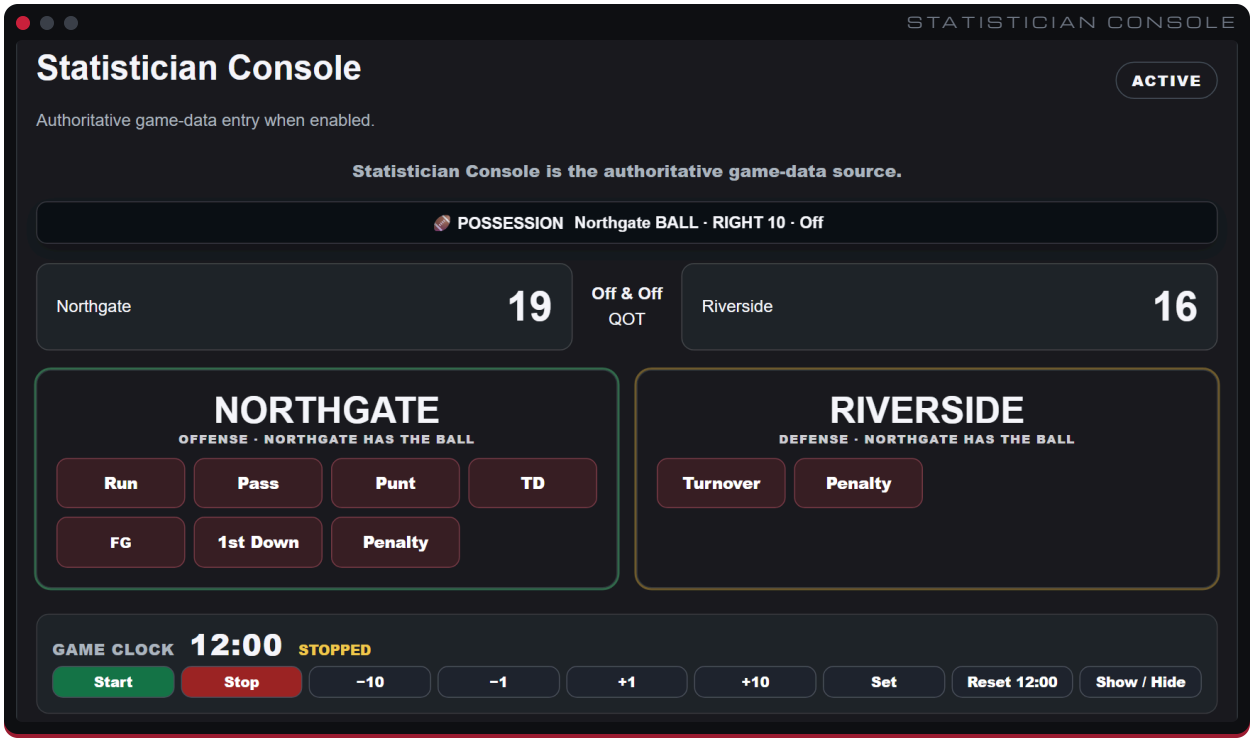

FIG 86 Northgate 19, Riverside 16. Overtime has no kickoffs, so no KICKOFF REQUIRED panel appears — go straight to Period Administration.

Ending the overtime period

1. When both teams have had their possession, press **End Quarter**.
2. Status reads **OVERTIME COMPLETE · QOT · Final/OT decision required**.
3. Still tied? Set possession and spot again and press **Start Overtime**. Someone won? Go to Phase 10.

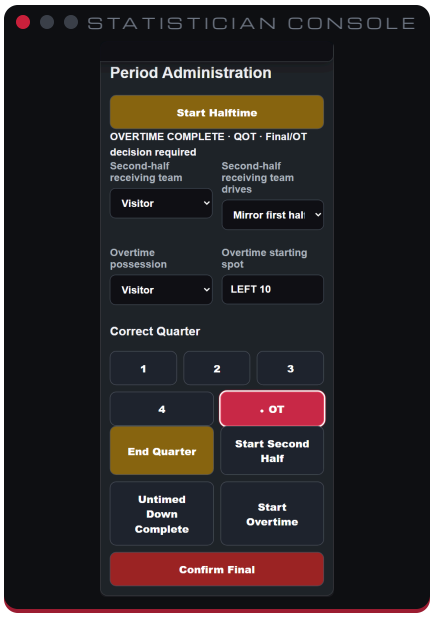

FIG 87 OVERTIME COMPLETE: ready for Confirm Final.

PHASE 10

10 End of Game: Confirm Final

Final is the only end state you touch. It locks the result, archives every play into the game record and tells the rest of the system the game is over.

Before you confirm

- The scoreboard matches the stadium scoreboard.
- The Play Register looks complete — scroll through it once.
- Any amber/unresolved plays from your notes are fixed (below), or handed to your producer.

FIX PLAYS BEFORE YOU CONFIRM FINAL

Confirm Final archives the game and empties the live Play Register, so the **Edit** buttons disappear. Make every correction first.

FIXING AN AMBER JERSEY FROM YOUR NOTES

Your notes say Play 11 — Riverside's run by "#22" from the 1st quarter — was really #5.

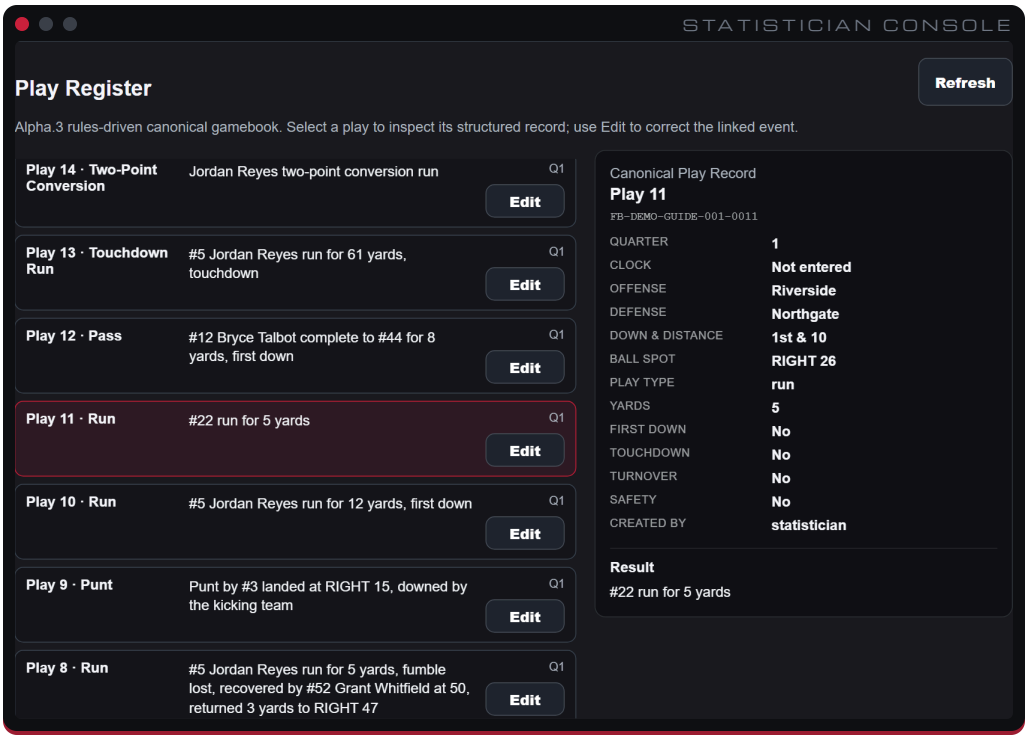

FIG 88 Find the play in the register: *#22 run for 5 yards* (no name, because #22 isn't a Riverside number).

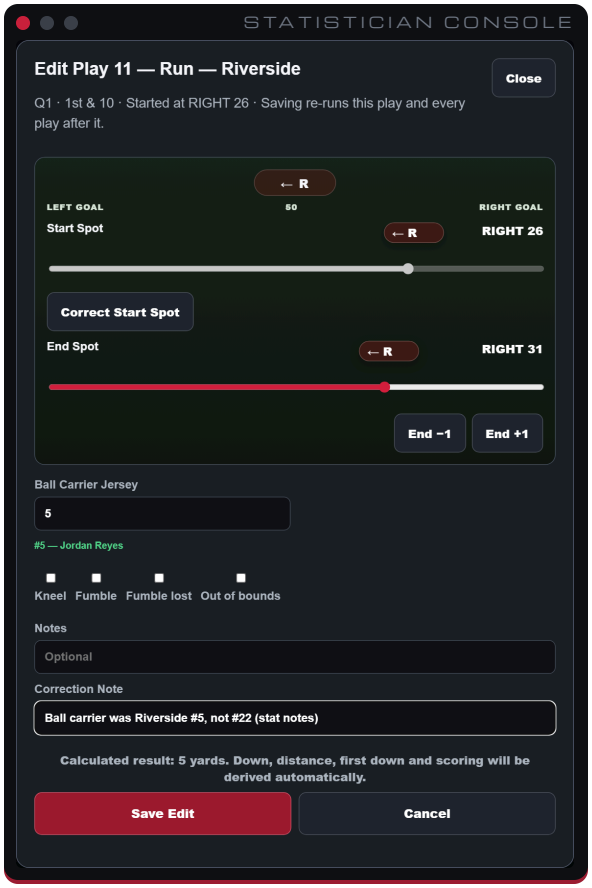

FIG 89 Its Edit form: Ball Carrier Jersey changed from 22 to 5, which resolves to Jordan Reyes, with a correction note.

1. Press **Edit** on that row. The play form opens filled in, with Ball Carrier Jersey **22**.
2. Replace it with **5**. The green line confirms **#5 — Jordan Reyes**.
3. Add a **Correction Note** and press **Save Edit**.

Nothing else about the play changed, so the score and every later play stay the same. Only the credit moves: the 5 yards now count for #5 in the stats.

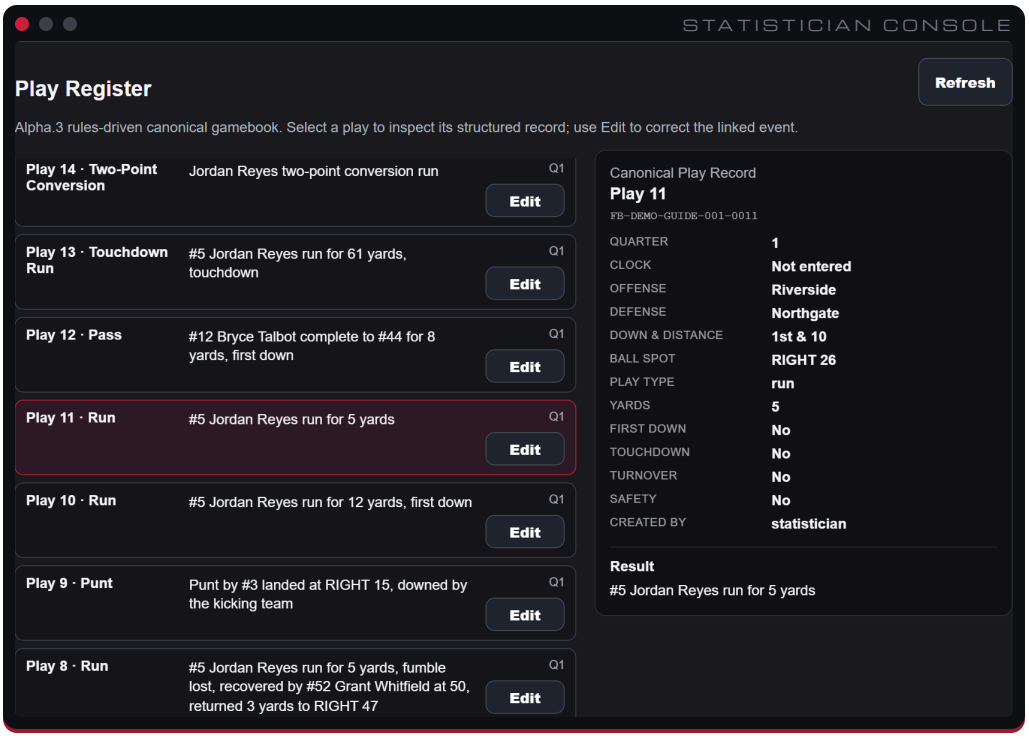

FIG 90 The row now reads *#5 Jordan Reyes run for 5 yards.*

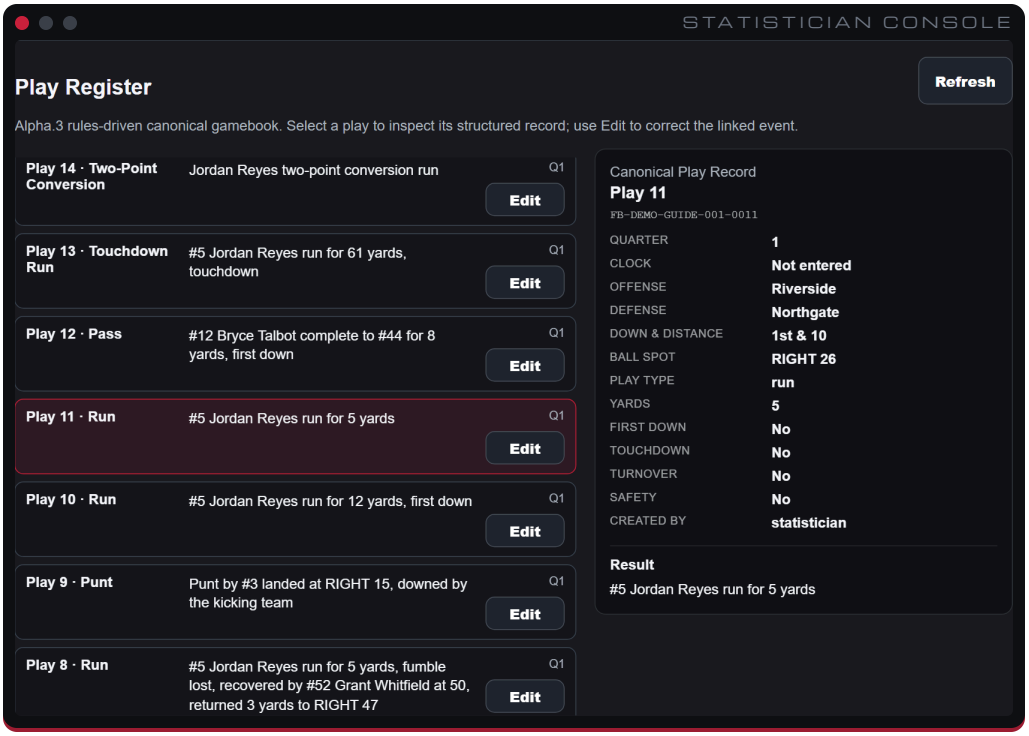

FIG 91 The register just before Final, newest play first.

Confirming

1. In Period Administration press **Confirm Final**. It only works after **Q4 COMPLETE** or **OVERTIME COMPLETE**; if the quarter hasn't been ended, you'll get a message saying so.
2. Your browser asks *"Confirm the game is FINAL?"* Press **OK**.

How you know the game is correctly closed out

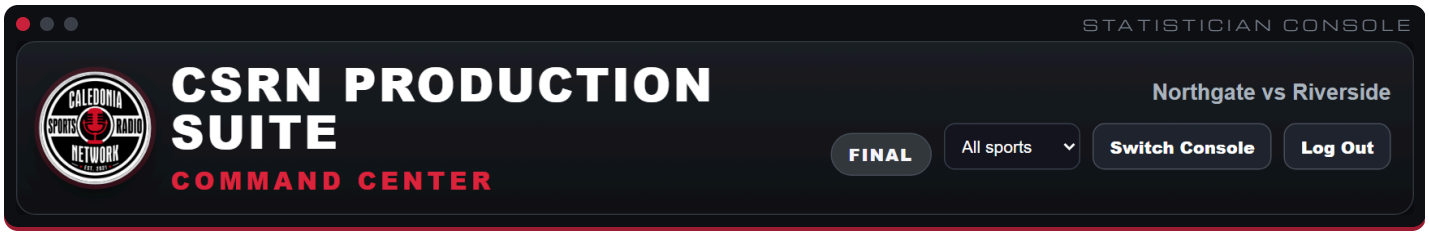

FIG 92 The header badge changes from LIVE to FINAL.

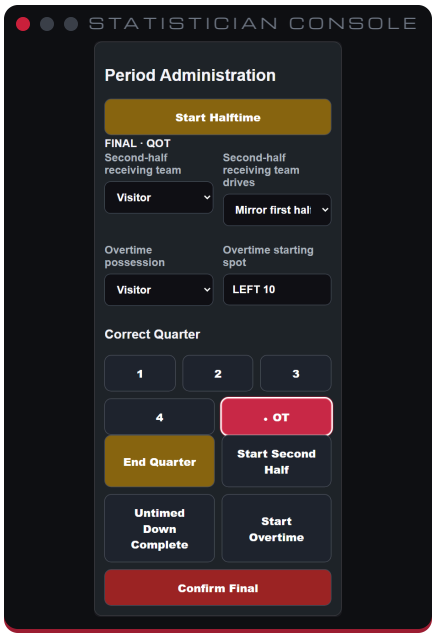

FIG 93 Period Administration status: FINAL.

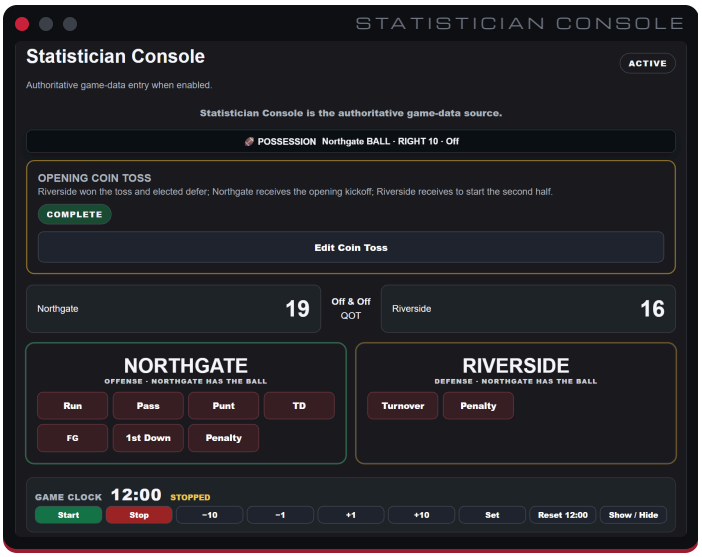

FIG 94 The scoreboard keeps the final score, 19–16.

You see	What it means
Header badge **FINAL**	The broadcast is marked completed with the final score.
Period status **FINAL · QOT**	The game clock is stopped for good; no more periods.
Play Register says *No plays recorded.*	**Expected.** On Final the system moves every play into the game's permanent archive and clears the live list. Nothing is lost: in this demo all 36 plays and the full box score were saved.

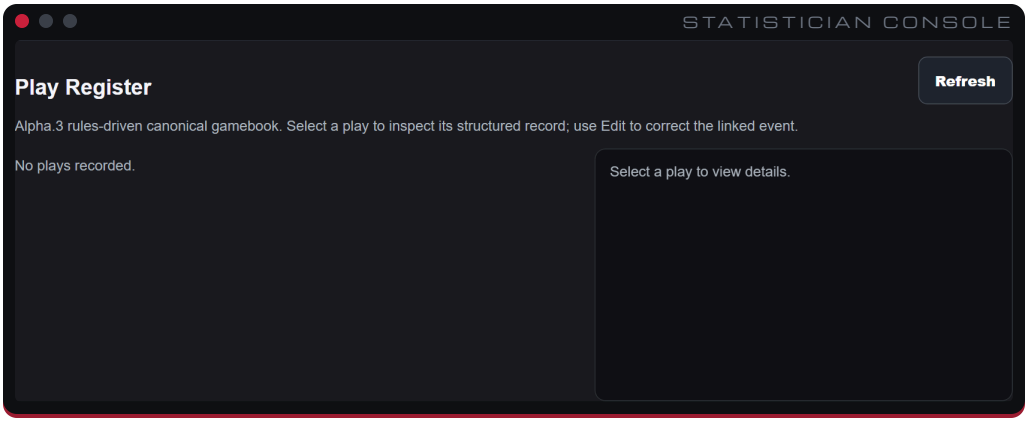

FIG 95 After Final the live Play Register is empty because the plays have been archived.

YOU'RE DONE

Once you see **FINAL**, stop entering data. Hand any notes you didn't get to fix to the producer, then log out with **Log Out** in the header. If you pressed Confirm Final by mistake, tell the producer right away rather than trying to fix it yourself.

APPENDIX

A Quick Reference Card

Tear-off summary: what to press for every situation on the Statistician Console.

Situation	Press	Fill in	Watch for
Opening coin toss	**Enter Coin Toss**	Winner, election, drive direction	Summary line, then **Save Coin Toss**
Kickoff / free kick	**Open Detailed Kickoff**	Kicker, returner, Landed, End	Touchback box for end-zone kicks
Run	**Run** (offense)	Ball carrier, End	Kneel, Out of bounds, Fumble / Fumble lost
Complete pass	**Pass** → Complete	Passer, receiver, End	End = where he was downed
Incomplete pass	**Pass** → Incomplete	Passer, intended receiver	End locks automatically
Sack	**Pass** → Sack	Passer, sacker, End	Sacker = defense jersey
Interception	**Pass** → Interception	Passer, pick spot, returner, End	Possession flips
Fumble lost	**Run** / **Pass** + Fumble lost	Recovery spot, recoverer, End	Possession flips
Punt	**Punt**	Punter, returner, Landed, End	Downed, Fair catch, Touchback, Muffed, Blocked
Penalty	**Penalty** on the **fouling** team	Unit, penalty, ruling	Auto first down / loss of down boxes
Timeout	**Stop** the clock	—	No timeout button; optional note
Touchdown	**Run** / **Pass**, End in end zone	As normal	TRY REQUIRED panel
Extra point	**XP GOOD** / **XP NO GOOD**	Kicker	**Confirm Event**
2-point try	**2PT GOOD** / **2PT FAILED**	Scorer, Rush/Reception, passer	**Confirm Event**
Field goal	**FG**	Kicker, outcome, distance	Made = +3, then kickoff
Safety	**Run** / **Pass**, End in **own** end zone	As normal	+2 defense, free kick
Wrong jersey (amber)	**Record Play** anyway	—	Note play #; fix with Edit before Final
Mistake just now	**Undo Last Event**	Re-enter play	Only undoes the latest event
Last play wrong	**Quick Edit Last Play**	Fix spot / jersey, **Save Edit**	Everything recalculates
Older play wrong	**Edit** on its register row	Fix it, **Save Edit**	Later plays re-run; some edits refused
Officials re-spot the ball	Field Position slider	Drag the ball, then distance	Ball: label, Game Context
End of quarter	**End Quarter**	—	Ends switch; spot label flips
Halftime	**End Quarter** after Q2	—	HALFTIME · Q2
Second half	**Start Second Half**	Then the kickoff	Q3 KICKOFF REQUIRED
Direction wrong	**← Drive** / **Drive →**	Mid-drive: also move the ball	Game Context yards-to-goal
Overtime	**Start Overtime**	Possession + spot	Move ball yourself for 2nd possession
Game over	**Confirm Final**	OK the browser prompt	FINAL badge; register archived
